

Kiran (0:00) Are we all ready?

Speaker 5 (0:01) Oh my god. I'm done.

Speaker 2 (0:02) That...

Speaker 1 (0:04) Best of your bad of giving... Book. What is going...

Speaker (0:14) On?

Speaker 2 (0:19) Object, object, object. Okay.

Speaker 5 (0:32) But we will. I'm waiting for...

Kiran (0:36) I don't know when I'll be waiting for anything.

Speaker 1 (0:39) Okay. So... Let's just...

Kiran (0:41) Yeah.

Speaker 2 (0:43) Do. Oh, I messed that up with...

Speaker 1 (0:50) Okay, I'll say without... You, Ben. Okay. Okay. Also, we're out... Done. So... I think the another public dashboard... Analytics thing, not really. But... That one's complete. And then I was about to do analytics for... The work of dashboard, but I'm guessing that... Someone did it already, someone said it was you, Kirin.

Kiran (1:11) Yeah, I already did it.

Speaker 1 (1:17) Oh my God, which one... Did you do? I mean, which one did you do? Because what I've seen... I've seen 49 is done.

Speaker 5 (1:25) But...

Speaker 1 (1:25) Did you do any of the others? Because then I can just... Move that.

Kiran (1:29) There were two of them that I did. It was... The number... Of things that they've done... The number of requests they've been assigned and like their average resolution time and stuff like that.

Speaker 1 (1:41) The view that personal summary questions. Yeah... Yeah. So that was... That was one. Did you do any others?

Kiran (1:59) No, I don't think so. I just... What I did was the notifications... And the messages.

Speaker 1 (2:07) Okay. Okay. So... On our... Project... We'll... Get up... And... It doesn't seem like I can... Assign you to this one that you've completed. Where do I need to change?

Kiran (2:22) I'm gonna have to delete it in Remake ads.

Speaker 1 (2:26) Okay. Okay.

Speaker 2 (2:37) Thank you...

Kiran (2:37) Okay, next person, please.

Speaker 1 (2:39) For being here.

Speaker 2 (2:48) No, next go next.

Kiran (2:51) Yeah, you can go next time.

Speaker 2 (2:55) Right. So essentially now street where I did it, if I can't remember correctly... Is that I... What did I do? I worked on mail on merging. Let me remember proper. Um... Well, yeah... Yeah. I worked on merging... The work of dashboards that we had done since for the previous print. We had did the work of dashboard... But then Kiran had also done his own at some point. So then we decided that we're going to help, we're going to keep his dashboard. So... I had to work on essentially moving... What we had done... From our side... To be implemented in the work of dashboard that Kiran had did. I also... Changed some of the things from a static into the interval. Go based... Approach to a just... Request. We request updates or like service requests every few seconds to something that uses... A listener or like where I'm assuming it uses WebSockets at the backend, but it is a listener that's provided by Firebase. And then after that, I also... Got the image set up thing all... Prepared in the backend, essentially. So now I'm just finishing it up so that... When the signed links expire it, actually refreshes them. Yeah, and then that's what... That's about. Oh, I think...

Speaker 1 (4:26) That's about all I did. Okay.

Speaker 3 (4:29) I did some user stories... For on the admin... Dashboard. One of the user stories was to set the priority levels of any service request. Go medium high or critical. So then it's like there's going to be like a drop down where you can say the request is like glue. Then I also made it so that the admin can close... Requests. And then there's also the still request tab so that... If requests are older than three days, it will pop up in that tab and then the admin... Should be then able to assign... It to workers. But I'm not, I didn't test that one out yet. The problem with these user stories was I did all the back end for it and it's on the admin... Dashboard. But I need to implement it still on the... The resident and the work at Ashwood. So I think I'll do that. And then another thing was that I did the user

story with... The admin can add new categories. Yeah. So that's what I did. The only thing I need to do is implement them... On the on the other dashboards. That's all.

Kiran (5:49) Okay, I'll go, but just... I'm kind of just repeating what I said to updo her. I did the messages... Between a... WCA and the resident who made the request, so that like 100% works. And I added the notification... Like modal or pop up. So when you get... Assigned to a service request or when you receive a message. And then those two... Combined. And complete full user stories.

Speaker 2 (6:30) I...

Speaker (6:32) Am going to...

Speaker 2 (6:32) I will wait till I run to the end.

Speaker 5 (6:37) I'm not going to run left.

Speaker 2 (6:39) I'm guessing so...

Speaker (6:41) Yeah.

Speaker 2 (6:41) I'm guessing so yeah.

Speaker 5 (6:44) I kind of clean myself but... Like I've only... Done anything... From what I did... Last time but I took on like maybe like... An extra user story that I'm working on right now... For... Allowing the admin to kind of... Like close a... Request... And give a description basically and what the closer request. I'll...

Speaker 3 (7:11) Say that. I'll say that's a really darn.

Speaker 5 (7:14) You're There's only the first management.

Speaker 3 (7:16) Wait, but that's... The story you chose though on the group chat. Should you...

Speaker 5 (7:22) Repeat that? One of us was for assigning is under the question management. It is in the assigned 21. Well, I'll send it to myself right now, but it is in the assigned 21.

Speaker 3 (7:33) No, it isn't assigned to anyone because I couldn't assign myself to it, but I've already done it.

Speaker 5 (7:41) But how many if you've done for the question management?

Speaker 3 (7:44) I did. I should know, I don't know. Let me go to the pool request. I did like four.

Speaker 5 (7:54) What do you mean by four? Don't leave four here.

Speaker 3 (7:58) That's really just read it out. Wait. And can you please delete the ones that say now you put the user stories on and maybe you put it on a different different repository. Can you please delete it and add it back on... Our repository so we can actually assign... The correct people to it and move it to done?

Speaker 1 (8:21) Okay. Yeah, we'll do...

Speaker 3 (8:23) It. Because now like it's getting confusing.

Speaker 2 (8:27) Make it easy. Should we should move what?

Speaker 3 (8:30) So like remember we added like i'm not going to say it's like certain user stories, but now... There's like... User stories that you can't access basically. It's when someone else is repository.

Speaker 2 (8:43) Yeah, I had done that for all the ones that I submitted before, I think. If I remember... As I'm accepting... Or like assigning myself, I've just been deleting the issues and then creating a new one.

Speaker 3 (8:58) Also, Tinder, I did use a story 27, 28, 29 and 30.

Speaker (9:03) 27...

Speaker 5 (9:06) 28...

Speaker 3 (9:08) 29 and 30.

Speaker 5 (9:10) Oh, yeah, that means... That like, yeah, the way I've done... It... Like, that's right. Unless, like, unless, like, some of this is a story of a lap. So, I did 25 and 26, right? And I was trying to add more. So... Like, in any of these stories, you have on that admin side, that ability to... Assign... Service requests that are open.

Speaker 3 (9:37) You see, that's the part that I'm not sure of. You see, like, in user story 29, right, there's this, you better look at the end-man dashboard and then there's still a request and then there's a button to... You able to assign... If it's a still request and a still request is like if it's older than three days... But I'm not sure if it's actually working because I didn't test it on the dashboard's yet... Because when I was working on these things the the dashboard... For when it's yet.

Speaker 5 (10:11) No... They... Can't...

Speaker 3 (10:15) They can't, they can't, they can't have a deal.

Speaker 5 (10:16) I'd say it kind of feels like my story kind of feels like it's done that now... Because like... If you can, if I use, if an admin can just... Assign like open service request and all be the need for having still for them to assign a standard request because they could just do that. Just override... That work. That's that's way... Better than what I am.

Speaker 3 (10:53) No, it makes sense.

Speaker 5 (10:54) I've already done that so I'll just like reframe the... It does that function on...

Speaker 3 (11:00) It. Okay, cool one.

Speaker 5 (11:05) Oh, I'll just... Find new ones.

Speaker 6 (11:09) Yeah, for me, nothing has changed since the last time, but I'm going to do a state... Today. Yeah, and just... Whatever's left over. I think the only thing that was.

Speaker 1 (11:22) Yeah...

Speaker 6 (11:23) A bit of a bunch of things. I'm not doing... All the ones that are like not done yet. But I've been able to pick some... Before the end of today.

Speaker 5 (11:33) And then the next question is, I...

Speaker 6 (11:37) Had to. Fix on... The requests... Like list of you list, whatever. Just like that whole page... That I discussed with you. I'm sudy. I lost time.

Speaker 5 (11:51) I... Have a question guys. Does anyone... Done the moderation? Is there stories?

Speaker 2 (11:58) No...

Speaker 1 (12:00) I'm not.

Speaker 5 (12:01) I'm just. The, the, the, the admin side. I think it's just a bit to put people like us.

Speaker 1 (12:08) Oh, yeah.

Speaker 5 (12:09) Oh... We don't have the title. To block residents who are like... Like, they let me. From that, inside, you have to block residents from the meeting new requests. When you suspect malicious or abusive activity. Spam filters basically.

Speaker 6 (12:27) Yeah.

Speaker 5 (12:29) Does anyone done that?

Speaker 1 (12:31) No.

Speaker 3 (12:32) No.

Speaker 6 (12:33) I think I could do this.

Speaker 5 (12:36) But I think it's...

Speaker 2 (12:37) Yeah.

Speaker (12:38) I'm not... Yeah.

Speaker 2 (12:39) Going to be able to... Spam filter.

Speaker 5 (12:44) Let... Them all fall for people. For us, Peming.

Speaker 2 (12:48) For us Peming what? Like the quest...

Speaker 5 (12:50) For the most part, yeah.

Speaker 6 (12:52) For that...

Speaker (12:55) One.

Speaker 2 (12:55) For that one. Yeah. But that one is... It could probably just be like checking. But what would you check?

Speaker 6 (13:05) Yeah. That's the thing. Like what's the criteria... For a spam?

Speaker 2 (13:11) You can check our... I could do that. I could actually do that because I remember for one of the projects we did last year... I had implemented something like something about entropy that checked. Essentially, if it's actually English words, you're trying to do right. Then after that, you could use... Rate limiting and... What? Rate limiting and... Just checking the descriptions if they're the same. And then images as well. They should be some... It could be some like, that you're calling it utility that allows to check similarities between images. Shoot. But I'm not sure if that will even be implemented.

Speaker 6 (13:50) I think you can take that. But... The sound content in the same. So...

Speaker 2 (13:56) But I already have two stories, remember.

Speaker 6 (13:58) Okay.

Speaker 2 (14:00) Okay. What is the mission? I think it's not like. And then there's the request one unless unless tend to wants to take the request one I had taken before.

Speaker 5 (14:09) Which one?

Speaker 2 (14:10) Um, let me just open the board and check again. It was essentially about filtering if I remember correctly. Just... Just filtering was sort of filtering based on ward and et cetera.

Speaker 5 (14:25) I don't know which one it is.

Speaker 2 (14:31) Good board. It's a request management user story... 22. It just says I want to view a list... Of all. I want to view a list of all. Let's assign to me filtered by status. Ward. Any.

Speaker 5 (14:47) I didn't hear the number.

Speaker 2 (14:49) I 22.

Speaker 6 (14:51) That's for admin.

Speaker 5 (14:54) Yeah.

Speaker 2 (14:58) All that. This. I'm not sure an app in two... Two, two, two, three, four.

Speaker 1 (15:08) Kir -an... The public dashboard, these are stories that you created, you can just delete them because... We added... New ones and just do it. We -'re done. -

Speaker 2 (15:25) Kiran. - Awesome.

Speaker 1 (15:30) Okay -. - Okay. - Kiran.

Speaker 2 (15:35) Did - he go?

Speaker 5 (15:37) I -'m not sure. -

Kiran (15:37) No, I'm still...

Speaker 1 (15:40) Do you hear what I said?

Kiran (15:41) No, sorry.

Speaker 1 (15:43) Okay. I was just saying your public dashboard, these are stories. You can just delete those because I... Yeah. Also... I've selected a... New one tracking U18. Has anybody done that? -

Speaker 2 (15:58) Try to make sure you're 18. Let me just check what I got. I don't think, could you say what it was about?

Speaker 1 (16:03) Yeah -, it's as a resident, I want to be able to view all my previously submitted requests and the Kiran status that I can monitor. The progress easily without having to contact me is a bad to find out that information.

Speaker 2 (16:14) I think that's a result of the... I - think that's a result of that. - Dashboard right? Is it not?

Speaker 6 (16:18) Yeah, I think it is 018, like 18...

Speaker 1 (16:23) 18... 18, 18...

Speaker 6 (16:25) Yeah, I think that like in the first week.

Speaker 1 (16:28) Okay. Yeah.

Speaker 6 (16:31) I was just double check but... Oh no no no. Checking U18... Yeah. It sounds like the one we can view your post...

Speaker 1 (16:46) Requests and the rest of the the whole request.

Speaker 6 (16:49) The one I wasn't... Called tracking. I don't know, this had changed.

Speaker 1 (16:55) What was... Yours called? Okay, look, you don't have to find that right now. I'll take this to see if you can tell.

Speaker 6 (17:01) Sounds like the one I did.

Speaker 1 (17:05) Okay.

Speaker 6 (17:06) Yeah. Okay. It should be implemented. Because yeah, it's the one we view your your post requests.

Speaker 1 (17:13) Yeah.

Speaker 6 (17:15) Okay. Previously. And and your current ones.

Kiran (17:16) That's a big name.

Speaker 1 (17:20) Let me see.

Speaker 5 (17:26) Thank you.

Kiran (17:30) Yeah. One more thing.

Speaker 1 (17:38) Yeah. okay. Cool. Okay, so...

Kiran (17:46) While I was doing the man I was looking for.

Speaker 1 (17:48) I understand myself, I can... I understand yourself, and just move it to complete it.

Kiran (17:51) It's nice, but...

Speaker 6 (17:53) Okay.

Kiran (17:53) I love, I history around.

Speaker 6 (17:54) Probably do in a double set.

Kiran (17:59) I love Oscar, not even.

Speaker 6 (18:01) Yeah, it is on, I did.

Speaker 2 (18:03) Play one. Oh, snap.

Speaker 1 (18:09) Okay. If no one's done... Analytics... 47, 48 or 50... I will... Do that for... Then be done by tomorrow. If anyone has done that, please let me know.

Speaker 2 (18:23) We use a story what?

Speaker 1 (18:24) Analytics... 47, 48... And 50. Here in city, 49. So...

Speaker 2 (18:31) Yeah, I don't remember doing any analytics, so I'm, yeah, I don't think so.

Speaker 5 (18:36) Okay. Okay.

Kiran (18:42) And then guys, tomorrow... Can we make sure we do testing? Testing of everything.

Speaker 2 (18:48) Yeah... I have. Have you done what you're going... To have you added the keys?

Kiran (18:58) Yeah, I did. I think... If not, I'll do it now.

Speaker 2 (19:02) Five. I.

Kiran (19:06) Okay, because I need to go. I need so we need to end the meeting.

Speaker 1 (19:10) Yeah, I also need to...

Speaker 5 (19:12) Go. I'm already going.

Speaker 1 (19:16) Yes, and she.

Kiran (19:18) Okay, cool. Bye bye guys.
