

Kiran (0:00) Yeah.

Sibu (0:00) Okay, and then after I do that... Then...

Kiran (0:04) You just sign in again.

Sibu (0:05) I won't be able... To, yeah, but I mean, I won't be able to see these changes in local host. Would I need to... Get a...

Kiran (0:12) You would, it still connects to the same database, so it still works. So...

Sam (0:12) Really?

Sibu (0:13) Oh.

Kiran (0:15) What you need to do is make sure you run NPM run build.

Sam (0:20) Yeah.

Kiran (0:20) Then do node server JS.

Sibu (0:25) Okay, I was using this run dev. So it's an.

Kiran (0:28) Yeah, run depth doesn't connect you to Azure. That's the problem.

Sibu (0:32) I see. Okay. So you're saying it's... NPM run build and then node server.js.

Kiran (0:38) Yeah, exactly.

Sam (0:41) Okay.

Kiran (0:41) Cool. Then yeah, I think that I wanted to ask was who was working on the public dashboard. Like not the public dashboard, the landing page. Maybe it was me. Hold... On. Maybe I'm stupid. Hold on.

Speaker 5 (0:56) Okay.

Sam (0:58) But he means you want... To do on the next.

Kiran (1:03) Pages. No, it wasn't me. Was it me?

Sam (1:13) What do you mean working on the dashboard?

Kiran (1:17) On the landing page. Who's was this? Oh, yeah, Sam, why would we have navigation to the world. The work is dashboard and admin dashboard through the landing page.

Sam (1:28) I didn't... Know for the value of this is sensed because... If you like if you get stranded in home page... You can't do anything for...

Kiran (1:37) I don't think it... Makes sense like in a product in like a fully produced...

Sam (1:40) The year. The problem is the end. Yeah it's possible.

Kiran (1:45) Project that makes no sense.

Sam (1:48) Yeah but it's not a fully produced product... And it was getting irritated.

Kiran (1:50) But we know, but like, we're, we're using, we're using agile method. So at every step, it has to be... As if it were... That iteration is fully produced.

Sam (2:03) No and then this one isn't... That big of a blind eye... Thing. The only problem I was using.

Kiran (2:07) You don't mind if I get rid of those two buttons.

Sam (2:11) I think where would you put them? Because we turn it... Away from... Every day to work at the end. But if you want to be smiling.

Kiran (2:16) Sorry.

Sam (2:18) Because right now if you go to home page and you want to be... Smiling in... Without those two buttons you have to look at it.

Kiran (2:24) If you do what?

Sam (2:27) To go to work at dashboard or resident dashboard, whichever...

Speaker 3 (2:30) User you want to be... Interested... In.

Speaker (2:32) I...

Speaker 3 (2:32) Know... It's the same thing.

Sam (2:35) You need to do... That things that I... Need. For now at least. Some.

Speaker 3 (2:44) I know it's the same thing.

Kiran (2:46) Can I suggest something? Why don't we just rather use smart navigation then? So for example... When you're on the public dashboard, right? So you guys can see my screen. When you click home... When you click on the home, it doesn't redirect you to the home page. It redirects you to... The dashboard depending on the, which what type of user is someone? Find it. And then problem solve.

Sibu (3:14) If it's... Whoever.

Kiran (3:16) So currently when you click on the home button, right, it redirects you to the home page.

Sam (3:21) Yeah, does that show off?

Kiran (3:23) But what if you're already logged in, right? And you want to view the public dashboard. Right. Then we just add... A button... To literally... The worker dashboard and resident dashboard and... Admin dashboard... That lets them... Go to the public dashboard, which is simple enough to do, right? Just button and navigate. Two slash... Public dashboard... Then on the view public dashboard on the dashboard... The home button doesn't navigate to home... What it navigates to is... Your home page or your dashboard page for that user type so if you are resident it will will navigate you back to the resident dashboard... If you're a worker, back to the worker dashboard... If you're an admin, back to the admin dashboard... And if you're not signed in, obviously then... It navigates you back to the homepage. I'd like that's a simple solution.

Sam (4:19) Sure...

Speaker (4:21) It won't work.

Sam (4:21) And that didn't work, but these ones I just placed hold is for now so that we can even retest and have a way to do it... And it doesn't really defect from the whole thing at the end of the meantime. So you could do that if you want to do it.

Kiran (4:34) Yeah, now I'm going to do it now while we're talking.

Speaker 5 (4:37) Alright.

Kiran (4:38) Okay... Then... Okay, I guess I'll do or you can start talking about what you've been up to.

Speaker (4:47) Okay.

Sibu (4:50) Well... Yeah, right now I had all user stories to do. I've only done the one so far, but I won't do the other two by tonight. What I've done is... I completed you the story 43. So that's as a member of the... No... That one I did yesterday. My bad. It's 44. As an admin, I want to control which data field. I'll be back with more videos of us on the public dashboards that send you to information such as personal details of reporters have exposed. So it's just stuff like... Can people see the... Ward... What it is... Who the... Municipal worker is? And stuff like that... So that doesn't get select. with your friends. to do.

Kiran (5:39) Cool. That sounds good.

Sibu (5:44) Yeah. Yeah. That's it for... Now. But I'll complete three mobile tonight.

Kiran (5:51) Okay. Next person. Sam. Jameen, Seaboo.

Sam (6:05) I...

Speaker 3 (6:06) Can. Yeah. So I basically just finished... The resident dashboard. So I removed the residents request page. Because the dashboard was basically doing what that was doing already. Yeah. So I was just busy testing.

Kiran (6:31) What do you mean? Can you just explain? What was the residence request page again?

Speaker 3 (6:35) Okay. We meet where you can just do all the post requests. And you can't. So I removed it and kept it so everything is on the dashboard. I think I can... Send a picture on the chat, but it's basically so you can see the list of your requests. So it is the request code and then you click on it. To choose the details... And the messaging... That you did. So the, I don't know, like portal or whatever. So all the details and the messaging shows... Just like on the right of that column. So it makes all the... Requests that you've made. So you click on the request, it shows all the details and the messaging. I tested the messaging also.

Kiran (7:30) It works, right? Yeah. Yeah.

Speaker 3 (7:30) That also works. Yeah... I just had to add stuff in the... Database... But yeah, like assigning a worker, while assigning the... Request. So there anything I'm trying to finish off. And just thing.

Kiran (7:47) Wait, wait, see, that's already done.

Speaker 3 (7:49) Yeah.

Kiran (7:51) What you're talking about. Go log in... Log in on our resident account.

Speaker 3 (7:58) I'm logged in with.

Kiran (8:00) So then, okay, so... So what did you do different... To this page that we already have? That's what I'm confused about, sorry.

Speaker 3 (8:12) Okay, so I did not see. So when you say the pages that you already have, like what's one of your like on the dashboard.

Kiran (8:18) Yeah. The resident dashboard, yeah.

Speaker 3 (8:26) I did not see like what you already like already had.

Kiran (8:30) Check it out now.

Speaker 3 (8:30) But one thing I... Oh, no, no... No. So I have everything now.

Kiran (8:35) Okay.

Speaker 3 (8:35) Like I'm looking at it now. That's almost... Shouldn't think like wasn't there. The details... But the request list... Was. Yeah. But there's something I haven't.

Kiran (8:48) So, but you've got... You've got the current main.

Speaker 3 (8:51) Yeah, I did.

Kiran (8:52) Okay. So you're working off of that. Okay. I'll just worry that you are doing things that might be done. I'll just worry about that. Okay.

Speaker 3 (8:54) Yeah. Yeah. Oh, no, no. Yeah. And then I'll just find what history is to me like...

Kiran (9:00) That's cool. That's cool. Don't worry then.

Speaker 5 (9:07) A few more.

Speaker 3 (9:11) And then I'll just send a picture of how it looks like currently. I was thinking of adding the image. So you know in your submit to request... And you view all the requests that you have submitted, when you click on it and view the details, just like in terms of the details or information about... Don't even think that I've been adding is the location... That requires a lot of time. I just... And like the image, I'm not sure if I should add that. Like the image that you submitted when you're submitting the request or uploaded... Like to show it all to the... Details... Of it. And then also just integrate it like feature because you should be able to like your requests from any, like wherever you can view your request, you should be able to like it from there. Shout out to basically it.

Sam (10:15) So, my God, why not?

Speaker 5 (10:17) We can go. So.

Sam (10:21) So I said from I said yesterday, I believe that I was going to continue trying to finish an... Image uploading or more specifically the showing of it as well. So I did that. So now... Signs you are else actually a refresh whenever they expired and it's notice when it's getting fetched. And then... I added a display for it's in the work that I should for like the need if you actually spend any of the details. It should load up the... Image that you the image that you're requesting. Then after that I also worked on... Implementing the sort of like a stamp creation. So first I you are at a rate limiting for idea that is using one of and the ntm packages of a level called express rate limited. I believe. Then after that, I also used... I implemented a function for ntmp as well as repetition just to make sure... That the description that someone is actually giving is interest to which. It's only for... Yeah, so that is not too much attention. And then... The image part as well, I made it so that it doesn't eat up as like that menu. Let me know what you will... Buy. That much quota from R. So... I

made it... So if you are submitting the same image again... It's essentially just going to... Turn one of the images not stored in the bucket. I did that using hash functions. But ever stored in the storage bucket is stored as they have as they're computed hash. If you want to complete a nav even, just check that. If the bucket fit already exists or not, if it does go to turn the side from L for them...

Speaker (12:14) Thank you.

Sam (12:14) Specific one that's already there. But then that's about it. Oh, I'm sorry.

Speaker 5 (12:24) So what I did was, so the work of verification is working properly now. So that's done all those user stories. And then what I worked on yesterday was I implemented all the stuff that I did on the admin dashboard onto the worker dashboard and the resident dashboard. So now as a resident, you'll be able to see on your submitted request the priority level. As well as... Whether the request was closed and the reason it was if the work is closed... And then in terms of the worker dashboard, it's the same thing. The workers would be able to see the priority... That was assigned to a certain request by the admin. And... What else? Oh... If some if a request was closed... And it was already assigned to them, they will see that it was closed. But if they didn't... If they didn't take that request... It's just still unavailable... And the admin closed it it will just disappear. And another thing is the still request. So... It's able to, the admin is able to assign a person... A request now. So it works. The only problem I have is... Tomorrow. So request after at least stay there for three days so we might not be able to show a Drusha tomorrow... If there's not a... Request that has been there for three days but what I'm thinking is maybe I can just take a video of how it works and then show up because it does work... Yeah that's what I did... And the categories the categories as an admin... They we can add categories... As well...

Speaker 3 (14:09) Yeah...

Sam (14:12) And then the thing about showing them... I think... It depends on how you implement it but you... Tell us if like a good word you just get and edit the page while you're there.

Speaker 5 (14:24) Yeah the only thing that has to happen is that instead of three I should just put negative one because then the requests will move to the style... Section. Yeah so it's just one line of code that needs to be changed and then we'll be able to show up.

Sam (14:40) That's what.

Speaker 5 (14:43) Yeah... But it does work last time I tasted it.

Sam (14:53) You can... Go right here? Hello?

Kiran (15:01) No, not yet. I honestly didn't do any user stories besides... I was just sorting out my merge requests... Making-- And doing merge conflicts to be honest. And... What else did I do? Yeah, I was just going through our merge conflicts... And... Pull requests and reviewing them. So like... Sam, you may have seen I touched on something that you did... In germane. I think I touched something that you did as well. And yeah... That's pretty much it that I did. I just... Sorted out the pull requests. So yeah.

Sam (15:48) I'm here. I was a little sweet. I'm going to say, what's it for the meeting? Oh... You... Guys, maybe, I'm going to say, what's it for? I'm going to say, what's it for the meeting? Oh, you guys. Maybe. I'm going to say, what's it for the meeting? Oh, you guys. Maybe. I'm going to say, what's it for the meeting? Oh, you guys. Maybe. I'm going to say, what's it for the meeting? Oh, you guys. Maybe. I'm going to say, what's it for the meeting? Oh, you guys. Maybe. I'm going to say, what's it for the meeting? Oh, you guys. Maybe. Didn't we say that we want to test or like, we just do that individually?

Kiran (16:02) We can do it individually, it's fine, but I have been testing and everything seems to be working. So yeah.

Sam (16:09) Okay. Let's go. Let's go. I guess. Until next time goes. Okay.
