

Sam (0:00) Okay, I see...

Kiran (0:01) Hello.

Thendo (0:03) You.

Sam (0:03) Oh...

Kiran (0:04) How is everyone doing?

Sam (0:04) I have a...

Thendo (0:07) Good one. Horrible.

Germaine (0:07) How does it mean you? Good.

Ab (0:10) What? How much do you think of the horrible? Which is it?

Kiran (0:13) Yeah, I'm guessing we're all studying for FLA.

Sam (0:17) Yeah.

Germaine (0:18) No, I'm just being honest.

Kiran (0:26) Yeah, okay. So... What I wanted to talk about today for our meeting... Is... I want... Us to finalize... All features that we have and we want to do by Friday. So... After FLA that day... I don't want us to be adding anything new to the project... And it should stand as it is. So after FLA. So that day. So Friday.

Sam (0:49) After FLD.

Kiran (0:52) Right. Friday... Like midnight... Early Saturday morning. I don't want us to be... Adding anything new to the project. So whatever you're working on... Try finish it by the end of Friday.

Sam (1:08) And it doesn't work, especially if like the holidays you have the same first, that means the same word. From Friday at sort of training for people. Any give.

Kiran (1:18) But as a not-you-en-monday was a two-weeks.

Germaine (1:22) No, the 20s do on Monday, but then we have to only some... The submission will only close on the finish weekend. So like the project.

Sam (1:32) And he still has the idea of making the story of that.

Kiran (1:33) Are we not all studying for SD anyways? So like... Let's be honest. Okay, fine. Yeah, no.

Germaine (1:41) No, no, wait, you write it here, because on the rubric it says we are to have all our tasks done by the industry and for.

Kiran (1:48) Yeah, so...

Germaine (1:49) If on the rubric.

Kiran (1:50) Friday, let's say... Whatever we're doing, we finish it on Friday.

Ab (1:55) Okay, hold on... You just said we're studying for SD.

Kiran (1:58) Because SD is the first exam.

Ab (1:59) Yes...

Kiran (2:00) It's on the 25th, I think.

Sibu (2:02) I think.

Kiran (2:05) Yeah, no, I mean on the 25th of May, we're writing SD...

Sibu (2:09) Oh, yeah, yeah, you're welcome.

Germaine (2:11) And it's just a week later.

Kiran (2:13) So like... Let's not be submitting things that weekend so we can study. And I think PC's also that week.

Sibu (2:22) I don't know why they cramped up these exams like this man.

Kiran (2:26) We literally have until almost the end of June for exams and we're writing all of them in the first three weeks or two weeks. I don't get it either. But yeah.

Sam (2:38) Only they expiast them all to bid.

Kiran (2:39) I think that... Exams are over five weeks and we're writing all of them in the first three...

Sibu (2:41) This... Year in April 8th.

Kiran (2:44) For no reason.

Ab (2:45) It goes no with a ton table.

Kiran (2:47) It's online unlike the website... On the VITS website.

Germaine (2:51) You can look on yourself service also on your self service portal is there.

Kiran (2:56) Okay. So I just want to talk about what I was doing. So I finished the messages like that works completely. Now... I added in a... Admin... Review... Messages... Page on the admin page. Right. So that page just allows the admin to view all chats... Between a worker and a resident. And then the admin can either decide. To... Close the chat... Or... Disable a worker from... Continue chatting with this person or with any people in general. So I'm working on that and that should be done by the end of Friday. Like I'm it's kind of working... But I need to do like more testing for it to be 100% sure... For it to be ready for the main branch. And yeah, that's all that I've been doing.

Sibu (4:02) I'm looking at the user stories... And... I feel like I just finished the request management... The last... Two left.

Kiran (4:14) Yeah, I don't think we should do user stories this week. Just one... I think each. really go for the then minimum this week in terms of user stories because I also don't want to do a lot of work for SD this week because we've got other stuff.

Sibu (4:21) Fair, fair, fair, fair, fair.

Kiran (4:32) Like guys... Can we each just do one user story? Something that closes... Off like a feature that we're working on... And... Basically can be i can say the project is complete. So like one user story each.

Ab (4:47) And we don't have to compete all the user stories. We don't have to compete all the user stories.

Kiran (4:50) Sorry. No, not necessarily... User stories Those will always use a story so not necessarily we can just... Get rid of the ones that we didn't end up doing...

Sam (5:09) I see...

Kiran (5:10) Because I don't know if you remember but use the point of a user story is that you would like to do this thing like as a resident...

Sam (5:11) I see. We're going to go about to do it.

Kiran (5:19) I want to be able to... Blah blah blah like it's not a requirement but as long as the requirements in the in the brief for the project odd done every other user story doesn't matter...

Sam (5:22) Here. Let me see that.

Kiran (5:35) So as long as we finish the requirements in the rubric... Then we're chilling...

Ab (5:42) See. Yeah. Okay. Okay.

Sam (5:43) One of them... Is... Required... Though.

Kiran (5:51) We not done that yet. I don't think it's been done so exporting what... The... Summary of... A workers like... Stats.

Sam (6:09) I think it's going to all the energy. In some CSB or something.

Ab (6:13) Because when I'm looking at the project... It says...

Sam (6:16) At least three dashboard reports request volume and that's what you see. It's time to find how to go and look at the performance. Customary unit... Post-reviewing, exportable as CSB... Or PDF.

Kiran (6:32) This, okay, make it someone... Say now if they... Are willing to take responsibility to...

Sam (6:43) Is that...

Kiran (6:46) Like someone who... Doesn't, who doesn't actually have any user stories... That they have to do now.

Ab (6:57) Part of analytics?

Kiran (6:59) Yeah, so I think you need, yeah, it is.

Sam (7:00) Well...

Ab (7:03) I see I think I did a sign-mass off, but I haven't done it. No one else wants that I can do.

Kiran (7:09) Is your public dashboard like completed?

Sam (7:13) No, the only thing is the live data, then... That's...

Ab (7:20) It. And you did... Edit it up, so... I just need to fix it, but then other than that, that's... Done. The whole thing works.

Kiran (7:28) Okay.

Ab (7:30) There's one other thing, it's a filter, but I have... Written the code, it's an idea to do like test cases and that will be done too. can you piece in me that file whatever you were talking about?

Kiran (7:37) Okay.

Ab (7:43) If give to?

Kiran (7:45) Oh yeah, yeah. Let me... Send that to you. Let me do that now. Thank you. Okay. Yeah. I'll send it to you now. Okay. Next person. Jameen. Do you have anything you want to say?

Germaine (8:19) I'm not sure about... What I'm going to do in terms of user stories, I still need to check. But there's something I want to work on... I want to fix something with the close... Closing the... Request. I don't know if something is not working as I want to fix that. And also, I don't know if you guys realized, but... We can move to the admin dashboard... Even if we're not an admin. So, I'm going to go ahead and do a little bit of the work. Using the root, so I'll just close... The end points so that only certain people can go. It works for the work at dashboard... Is the only thing that's implemented like that. But the rest... We can actually go to the admin... Dashboard without being logged into our, i'll just fix that also... For now.

Kiran (9:12) Through what roots... Can they do that?

Germaine (9:15) Like, I don't... Know. So let's say... You log in as a resident, right? And then in the browser, the URL... You just, you just say like slash admin because that takes us to the admin dashboard and you like... Get there.

Kiran (9:30) Oh, that is...

Sam (9:32) Yeah.

Germaine (9:33) Yeah. So I'll just, I'll try to fix that. Yes. So I noticed that. And then... I'll just fix the bug in the... The closing the request. Yeah. For now, that's the things that I would like to go on.

Kiran (9:45) Okay, that sounds good.

Ab (9:47) We...

Sam (9:49) Have feedback. Like, do you have like feedback already implemented?

Kiran (9:56) Isn't that like the in progress... Completed and that stuff?

Sam (10:03) Yeah, but like the one we like to do, resident things of mid-speaker, because that is what you think like a routine.

Germaine (10:11) But the liking thing.

Kiran (10:12) No, was the liking feature not for... Increasing priority?

Sam (10:17) That's for all. Yeah, that's for priority. But this one I'm asking you... Both reviewing. Does anyone, does anyone remember implementing a review for resident?

Ab (10:29) No.

Kiran (10:30) No, I don't think so.

Sam (10:33) I'll take that on cause it's actually an environment.

Kiran (10:36) Okay.

Sam (10:38) If you checked out... Please, please, we need to have... A resident being able to stop it just at satisfaction feedback.

Kiran (10:47) I will try... If there's any other user stories that we need to do, I can try to do them on Friday. If I finish my one... Quite quickly, because it is almost done. And then in terms of... Code coverage, I think we're fine, right?

Sam (11:05) Yeah, because... That one I think the closest one was what he presents... And then there was another after that. I'm not sure... I could put them.

Kiran (11:13) Yeah.

Sam (11:13) I remember... They being.

Speaker (11:15) Should.

Ab (11:15) Yellow.

Germaine (11:21) So basically our goal is to be done with the project on Friday night. So basically set today we done.

Ab (11:29) Yeah.

Germaine (11:31) Okay, that's.

Sam (11:34) Yeah.

Kiran (11:36) Yeah, because I don't want us to be like panicking... And stressing on Sunday night.

Sam (11:42) The resident... In analytics. I covered it also. The new system. I think it should be far. Can we have a publicly visible dashboard?

Kiran (11:58) Yeah, that's what a girl, my updraft man's done.

Germaine (11:59) Yes.

Kiran (12:02) Slave boy.

Ab (12:03) Why do you think my family...

Kiran (12:04) Slave... Silence slave. Know your name.

Sam (12:10) Sometimes it's not. He's going to like it. So cool.

Kiran (12:18) Okay.

Ab (12:18) What?

Sam (12:20) And he's not like a superman.

Ab (12:24) So the... Deployment. And I can't really say. I can't...

Kiran (12:31) Uh, no, it is done. That is the public dashboard. What he's done. That's it.

Sam (12:37) Tell you.

Kiran (12:38) Yeah.

Sam (12:42) The test put. The test put. Oh, so he's really... Tall. It's just a reason. Push the code.

Kiran (12:46) Yeah, he said he's still writing tests for it.

Ab (12:47) No.

Sam (12:50) Okay. Yeah. Because I was looking at the. Are you guys? It's a lot. Reason. The admin can say priority. I don't mean what seems something. Yes.

Germaine (13:10) Yes. Yes. I can do that.

Sam (13:13) That's what the. I was looking at this. I'm. I'm. I'm. I'm. That's why. So those two are the ones that I need. Then everything was just essentially for us. Just. Make it look nice and feel nice. Hello?

Kiran (13:46) We can hear you.

Sam (13:48) Yes.

Germaine (13:49) We agree.

Sam (13:52) I then I guess this is a party for the mission.

Kiran (14:00) Tendor, what are you up to this? What are you completing?

Sibu (14:07) I don't know. I don't know. I didn't like... Functional requirement. I actually like requirements left that we've been touched. These are the ones. If there's none, then I'll just pick like a random one... That no one has.

Kiran (14:22) Okay. Okay.

Sam (14:22) I'm not a derivist. What? You should be simple. Never mind.

Sibu (14:33) I'm going to make sure that all the actual requirements are done.

Sam (14:38) Yeah, that's the one I was checking. It's just the LLX and the thing. You could help up through the LLX. It's with three stories.

Kiran (14:45) Reason.

Ab (14:48) Yeah, you can... Let me just tell you which one I've done and then you can... Pick from the other two.

Sam (14:55) Okay.

Sibu (14:59) Okay. I'm...

Ab (15:01) Just checking right now.

Sibu (15:03) Oh... Okay. Okay.

Kiran (15:05) Service.

Sam (15:06) Okay. Yeah. What's the opening?

Kiran (15:08) All right. I'm still doing that thing for you. I seem to have lost the doc that I made so I'm just remaking it...

Sam (15:08) So we have to remain.

Ab (15:14) Let's see, let's see, okay.

Sam (15:17) So we have to require analytics and then one, like three essentially. Two of them I explained that we need like request volume and resolution times by category. I'm not sure if there is something I think it's the one that you guys are doing now. Then worker performance, which is that every generation... Has a thing. Then we need one that's casting. Then all of them should be... Exportable as... CSV. The CCSV... Says it's just a simple effort... Compared to Kenya.

Ab (15:53) So from these three and that you actually haven't... Done any of them... I was mistaken.

Sibu (16:00) So... What is event for 10...

Speaker (16:04) And 15? What?

Sam (16:05) Between 47, 40 and 50, right?

Kiran (16:07) To 3, 4, 5, 6, 7, 8, 9.

Ab (16:08) 47, 48 and 50. Which do...

Sibu (16:14) You want? Let me remember. I'm moving for the ages. What does the custom view?

Sam (16:21) I would say... There's one that's... Missing... From... The analytics. Let me just check. I like 50, 50 seems nice. Okay. Yeah, we have an analytics that's missing that we need. Requested volume at... The same time by catch. I don't see it. It's a story for me.

Ab (16:49) And you say again... What it's about?

Kiran (16:53) Such as...

Sam (16:53) Requested volume... At the same time is located.

Ab (16:58) I don't see anything better.

Sibu (17:01) It's in our project... Brief. Project brief here.

Sam (17:05) Reason.

Sibu (17:13) Because... The user story I was in the gym was like canceling a request. Which is that? I think it's submission 13. Yeah, yes, 13, but it's not like part of the actual like requirements that we need to be. So... Reason. I mean, I could still do it, but I guess, during the ones that are needed so for the analytics... Could be better. Now... I could take one of them.

Ab (17:52) Like. I'm hearing you can delete the two public dashboard ones that are... What made by you I did those.

Kiran (18:03) Okay cool. Then... Here's the dock... As well that I made.

Sam (18:11) Kirin.

Kiran (18:24) Struck. Struck. Drop... Them what's in the box. What's that for discord?

Ab (18:33) What's up? It's better.

Kiran (18:35) So yeah you guys can also use this. It's just basically taking the structure of the entire database... And gives you all the files... All the tables names and field names.

Sam (18:52) Well... It's.

Kiran (18:53) Okay. Then.

Sam (19:02) So if you can't finish both.

Kiran (19:04) So. So can we just quickly before we go right. For this sprint... This last week, can we just all go to... The... Issues... The backlog, the... Backlog, right? And then go to... Current iteration... Right? Can we all just... Add the user stories that we're going to be doing? To the current iteration... So iteration 4. Okay... So can we all do that?

Ab (19:42) Okay.

Kiran (19:43) And then you seem to, you, you've read and you know the user stories that we need to have done.

Sam (19:46) That was so cool. My.

Kiran (19:54) That are the requirements of the project. Do you mind adding those to... What you might call it the current iteration?

Sam (20:05) I don't know them. Some of them... Are too. They isn't even a user... Story. Cause for now, right? At least as far as I can tell from the brief. There's only... Three two four things that need to be done. The residents of Mitzinger Review. Of you. Then the analytic that's the first volume and resolution time is from a category. There's the custom view resident. And then the post should be exportable. So... The repository be exported one is already there. And it's going... To be late. Then the others I think you're going to have to create any ones.

Kiran (20:37) Okay, so, can you just tell me them again?

Sam (20:38) Anyones?

Kiran (20:40) So, the first one you said was...

Sam (20:44) There's a link like this, that's been able to, so whatever. I really... Love the feedback one day, it's just that it's for the ending, it would say.

Speaker (20:54) Thank you very much.

Kiran (20:55) I'm going to make this user... Story like 60. I don't know, I think we've got 50 though, so maybe 51. Yeah, user story 51. So... This one... As... A... Resident... I... Want to... Give feedback... To the worker. For... After... They... Complete... My service request. Is that fine?

Sam (21:36) Yeah. And then there's... An analytic... That is... It needs like to request volume and present 10 times an occasional... Volume. So it is actually an average resolution... And volume... Like sorted... Or filtered... By cat or body.

Kiran (21:55) So, in the analytics, I want to be able to filter.

Sam (22:00) It's in a way it's just using a tool to see like request volume.

Kiran (22:03) Can you type it out because I can't see what you're seeing as well to be clear?

Sam (22:10) Just call or...

Kiran (22:11) Yeah, I'm just going to.

Sam (22:14) I'll just write down a little bit.

Kiran (22:16) Yeah, that's fine. Okay, does anyone have decided that they're going to do the as a resident? I want to give feedback to the worker after they complete my service request.

Sam (22:22) All right. Hey. It's up to that.

Kiran (22:38) Are you sure there's nothing like that?

Sam (22:42) We have feedback and that's already from it. He said that analytics like smooth.

Kiran (22:46) I see. Yeah, not really. No, we've got that. Wait, I've done that.

Sam (22:57) We've done a lot. We've done a lot of performance content. I thought so. But...

Kiran (23:02) I've kind of done that. I've done this request volume and resolution times by category. I've done that.

Sam (23:11) I'm not sure.

Kiran (23:13) Sorry.

Germaine (23:15) I'm not sure it works.

Kiran (23:17) It works. It works. It works. I just need to update. I think based on the new field names that we're using, it's because I'm not using the new constant.js that Sam added.

Germaine (23:23) Yeah, and also because it just picked up water. Like remember we were doing like electricity and stuff, but it didn't pick the other categories of the... Okay.

Kiran (23:40) That's why. So if I just use that then all work. Okay. So I'll fix that. And then the custom view. So as custom view like filtering that page.

Sam (23:54) Now I'm missing... A certain...

Kiran (23:58) Sorry.

Ab (24:00) Thing. It takes like one more tube to stay there.

Sam (24:00) I'm... Missing a slightly important and it takes... Like a day... To. So there's something we devised. It's... That it's those two.

Kiran (24:10) Okay. So I'll do... All three of the I'll think make sure these three are done. That we just discussed. Because I've basically they're basically done. Except if someone else needs to do the feedback though.

Sam (24:29) I said I would be the big bag.

Kiran (24:31) Okay. Okay. Can I. I'm just going to assign you to the feedback one. Sam.

Sam (24:36) So you did the custom unit. Wait. So you did that whole...

Speaker (24:42) Unit.

Sam (24:42) So you see all of the love, essence and the red... Time. What's your question? You?

Kiran (24:46) I don't know, I didn't, not the custom view, that's not done. The, um... What's it? The work-up performance is done. Custom view is a bit vague, but I think that just means, um... Filtering.

Sam (25:04) I think by the way it's like it phrased it by three dashboard reports and then including those two at the top. It needs it to come up like so actually on an image.

Sibu (25:16) Like a source.

Kiran (25:18) Okay. Yeah, for the admin.

Sam (25:22) I.

Kiran (25:23) Okay, I'll do it, it's fine.

Sam (25:24) So I'll show. What should be exportable. But I'm do say you do.

Kiran (25:31) Then, okay. Uh, analytics. User story 61. Then, as an... Admin... I want... To... Be able to view... The worker... Performance. Um... I want to view the walk-up performance. In a... Custom... View... Whatever... That means, I don't know. It's fine. Okay. I'll assign myself that one. And then... Cool, then reports should be exportable as a PDF. Yeah, during you said that that's already... There.

Ab (26:31) No... No, no, that's... Not the whole other thing.

Kiran (26:35) Oh, is it not? Okay.

Sam (26:38) And we must do this with each... Other. So like, you should be able to choose to just do for the faster we need to perform and so on.

Kiran (26:45) Okay. Okay. Wait, what's it? Oh, we do have them. Okay, I know they all already created. I'm sure you've just assigned yourself to it. Okay, my bad. I see.

Sam (26:58) And we'll perform to this. Oh.

Kiran (27:05) Okay, cool. Then that's it for the meeting. We all know what we have to do, right?

Sibu (27:11) Yeah, I'm just going to say I'm still going to do the submission yesterday. Because it does make sense like for resident to be able to cancel... Their service. Yeah, like they made a mistake whatever before it has been... Signed.

Kiran (27:29) Okay. Then also another thing, Seibub, make sure you like system, right, that does, that has to work.

Sibu (27:30) Yeah.

Kiran (27:38) That's important, that one.

Sam (27:41) Mm.

Kiran (27:42) And then... Have you implemented something where to flex... Increases the priority of it based on the number of likes?

Sibu (27:51) So yeah, no, no, no, I think it doesn't. Yeah, so it's not linked to the priority level yet. So I'm sure I could also just make sure... That it is linked. Yeah, because I did notice. But okay, another thing is that each resident can only like their service request once.

Sam (28:17) Whoa.

Kiran (28:20) So they can't like, so we can't like, we can't like other people's service requests.

Sibu (28:20) And that's how it is now. Yeah, so... I've... Done that like on.

Kiran (28:27) That's okay. That's important. Get... That one. Get that done for Friday.

Sibu (28:29) Okay, so I should. Okay, I should implement that on the public dashboard.

Kiran (28:37) So make that a separate tab on make that like a separate section in the public dashboard. So you not... Interfering with what, uh, of door A B's doing.

Ab (28:48) Okay... How many different names you're going to call me in one meeting, but okay.

Kiran (28:52) At O, you said you don't like being called up doors. I'm switching back to A B.

Sibu (29:01) Okay. Okay. In terms... Of... You know, like... A voting whatever... A resident should be able to... Basically like a service request on the public dashboard, including their own, of course. Okay.

Kiran (29:14) Yeah. yeah, each service request they can only like once.

Sam (29:20) And then they can only like it once.

Sibu (29:20) Right. I can kill...

Speaker (29:24) It.

Sibu (29:24) Okay.

Kiran (29:24) On the... Work side... I need to actually update the work side. There's like a... Block that we have for the... Service request. I need to update that to be more visually appealing... So that it reflects the number of likes and you you can sort it in terms... Of likes like. From "Bost Like" To "List Like" so I'll also do that.

Sam (29:48) Because it might question... What? What are you starting around? You starting with the likes like a service request.

Kiran (29:57) I think...

Sibu (29:58) I... Thought the name.

Kiran (30:01) Is it a separate collection inside of your... Is it a...

Sibu (30:02) You check.

Kiran (30:07) What's it? A... Child table of your... Of the service request? Because that's what I'm seeing. Is that what it is? a child table of the servicer quest.

Sam (30:27) Fine. We'll go check.

Kiran (30:31) Okay, we'll see. You need to figure that out, right? How you sorting out the likes and storing it.

Sibu (30:34) Yeah. Yeah.

Kiran (30:38) Maybe. Maybe don't, I don't think... Having it as a... Subtable of the... Servicer quest is... Actually it's not a bad idea because you're going to have... A table of likes per servicer quest. Actually...

Sam (30:56) That's what...

Kiran (30:57) But you could just make it a field in your service request to be honest.

Sibu (30:58) We want to...

Speaker (31:02) Know.

Sibu (31:02) So I know likes is... Just a field in the service requests.

Sam (31:08) And unless you're storing it... Is the right. At least the IT is just like a user isn't supposed to be able to like that something... Twice. Remember.

Kiran (31:17) I don't think we need a store. Oh, yeah, wait, we do need to store who liked what so you can only like it once. So yeah, civil, you need to...

Sam (31:19) So. If you want to go.

Kiran (31:27) Get this one done.

Sam (31:30) You just have to start as an array of these... IDs. So that whenever someone likes you, they have to check if they use the IDs and to regulate. Yeah. When if you want to get how many likes you just get the list of the array.

Ab (31:46) Oh, it's super safe.

Sam (31:47) But yeah, you still send pass them as well. You can use JSON files and like... To create the array and pass it. And then all likes to verify it.

Sibu (31:58) Yes.

Kiran (32:02) Okay, cool. So we've all got what we need to do.

Sibu (32:07) Yeah, so I think I'll do the... Canceling a request last then.

Kiran (32:12) Okay.

Sibu (32:13) Just make sure that... The liking thing is just working everywhere.

Kiran (32:19) Okay.

Sam (32:20) Yeah.

Kiran (32:20) And then... Saturday, Sunday. I guess we could push leave also Saturday open for adding in these features. But... It's up to you guys. And then we leave Sunday for in making sure that things are working. And then we have the last week for polishing, right?

Germaine (32:34) Okay.

Kiran (32:43) Is that what...

Sam (32:44) Okay.

Kiran (32:44) We have, is that the situation, right?

Sam (32:48) You can add say Saturday because I finally get in here at time from now until I get you start to affiliate.

Kiran (32:54) Okay, that's fine.

Ab (32:55) Yeah, maybe sell day like sell day night before meeting. It must be done very quickly.

Sam (33:07) Yeah, one step.

Kiran (33:09) Yeah, everyone's good then.

Ab (33:12) More tip. Cool, cool, cool.

Sam (33:13) Until next time, good.

Kiran (33:16) Okay, cool. Cheers, everyone.

Sam (33:20) Bye guys.

Kiran (33:22) Bye, Abdulrahman. think it means like child of light or or basically child of God.

Ab (33:27) What is your name? Me. This guy's Jesus.

Kiran (33:38) Basically, basically, when I was a kid, I used to think that my name and the date of birth meant because my date of birth also coincides with my name.

Ab (33:39) Wow.

Kiran (33:49) So I thought I was low key Jesus when I was like four years old. Because the date of my birth is... Says that people born one of that on that day... Are children of light.

Ab (34:01) When is your birthday?

Kiran (34:03) And then my name means child of light and child of God. It's on the 24th of April... In the Hindu like... Stuff. It means... Child of light.

Ab (34:14) Okay and in terms of name here you got me.

Sibu (34:20) Bye... Bye.
