

Kiran (0:00) Sigh...

Speaker 5 (0:03) What are we even supposed to be saying in this meeting?

Kiran (0:06) For this meeting we're... Just doing another run through the project. Just to double triple... Check... That we're all good.

Speaker (0:17) Okay.

Speaker 3 (0:20) Right.

Kiran (0:22) I did manage to put in... The messages, the message components... And do all the test cases for it. And then... I guess... AB... And Cebu you said that I can accept the pluracost.

Speaker 5 (0:45) Whoa, whoa, whoa. I said you got to check it out. The test coverage went up to like 79. So...

Speaker (0:52) Yeah...

Speaker 5 (0:53) That was how is it went. Thanks to Sam. Yeah.

Speaker 4 (0:58) And the major conflicts almost are...

Speaker (1:00) Resolved.

Speaker 4 (1:02) So, it shouldn't be any issues.

Speaker 3 (1:05) Yeah.

Kiran (1:08) So they read me, I'm just making it all accept current.

Speaker 6 (1:13) Not at the end.

Kiran (1:22) The resident dashboard, let's see. Hello. Okay. Let's... See. Yeah, accept current. Cool. Um, submit your view.

Speaker (2:23) Perfect.

Kiran (2:27) Oh... Then... Just wait for the check so then we can... Do accept the pull request. Looks like it's... Passing everything. No, failed three. Hold on. The test coverage. That's fine. Oh, and a test that's failing. Let's see. Let's see. Okay... Let me check why this is very lengthy. It's probably the resident dashboard test that's failing. Let's see why. Okay. Oh, it's only two tests. Let's see. Let me see if this can fix itself. Um... Otherwise, can you guys just quickly go through the project again like we did yesterday? Like just double

check that everything's fine. President Ash Bond tests. Are you guys not going, are you guys going through... Like, lovely.

Speaker 5 (6:44) Yeah, oh no.

Kiran (6:46) So that the meeting picks it up.

Speaker (6:49) Okay, okay.

Speaker 5 (6:51) Okay, we can do different sections. Um... Well, let me just go. I'm on... The public dashboard. I can see all... The open requests. Can use all the filtering. The map displays on your requests. I can... Look at award boundaries.

Speaker (7:11) I can.

Speaker 5 (7:16) I can like... Things.

Speaker (7:22) Okay.

Speaker 5 (7:26) I'm going to do a different dashboard.

Speaker 6 (7:31) To go into residential pick.

Speaker 3 (7:38) Let's see what we do.

Kiran (7:47) Can I fix the arrow?

Speaker (7:53) Okay. Thanks. Okay.

Speaker 6 (8:11) Yeah, so I can do a review.

Speaker 3 (8:14) And everything. What to just do.

Speaker (8:22) Thing too.

Speaker 3 (8:22) So let's do something. I can submit a request as well.

Kiran (8:56) The new component pop up? Like the message confirming it. I don't know... If it does... For that.

Speaker 6 (9:10) Let me do again. I wasn't paying attention to that.

Kiran (9:14) It doesn't, it doesn't, it's fine.

Speaker 6 (9:17) Test.

Speaker 2 (9:32) One other thing we should do is probably like. Like clean up our backlog, like... Move everything to the creation.

Kiran (9:41) Yeah, let's also do that. Yeah, let's do that now. And then last night, I... Updated our diagrams. And... Mostly the... Update to the component diagram... State diagram... Plus diagram... And use case diagram. Development diagrams stay the same. That didn't mean to challenge.

Speaker (10:08) Move.

Speaker 3 (10:19) What does it fit?

Speaker 6 (10:22) Sixty.

Kiran (10:29) Yeah, let me also find my one. Yeah, cool, I'm gonna merge... All blur request, see you, and then what done. That's it.

Speaker (11:11) It's still going to plan.

Speaker 4 (11:22) Please just double check the CSS...

Speaker (11:25) File.

Kiran (11:26) What do you mean?

Speaker 4 (11:27) Because I... Know just like on the request card. I mean, no, there's nothing wrong with it. But I'm just saying like...

Speaker (11:33) It...

Speaker 4 (11:34) It looks okay. Like the length of you... See, was it the priority level... The latest thingy? And... What was that one? Not the light comes. Yeah, like if... It looks okay. But I think I couldn't like make it shorter... Than that, than like what it is.

Speaker 6 (12:05) It's been a time since then.

Speaker 4 (12:10) And then the toes requesting to use on the lurch.

Kiran (12:17) Oh, all it's fine. Just leave it. It's just one.

Speaker (12:24) May...

Speaker 6 (12:26) Can you check like a SAT, the US 12, I think it might be, I mean, no... It might be the public public.

Speaker 5 (12:37) As... You know, I want to see physical board boundary display, oh, and the submission app. So yeah, yeah, okay. I did that one.

Speaker 6 (12:46) Yeah, okay.

Speaker 5 (12:47) Let me just move it. Yeah, I did it a while ago. So should... I put it in that iteration?

Speaker 6 (12:55) Yeah, yeah, put it in the correct iteration if you're remembering it.

Speaker (13:00) I think...

Speaker 3 (13:00) It was...

Speaker 5 (13:01) The second one.

Speaker 2 (13:06) So get to go to your report on the admin page. Just pick some water.

Kiran (13:13) Does you serious?

Speaker 2 (13:14) Here. Yeah, it just shows water... With making progress.

Kiran (13:28) Merci.

Speaker 3 (13:29) So... Could you repeat that?

Speaker 2 (13:33) Like if you go to the admin dashboard... Like undercats... Real reports... The only category that's being picked up is water.

Kiran (13:43) It must be text conflicts like casing. Okay.

Speaker (13:52) Hmm.

Kiran (13:53) Because what it's using... Is... From the constant.js. I think that's the problem. And that might be outdated. So rather... okay, let me change it. Hold on. I can fix it very quickly. admin category report page.

Speaker 5 (14:12) Where is the session?

Kiran (14:25) Let me see if I can fix it. So there are fetches from the settings, I believe.

Speaker (14:41) Jiang... Pi...

Speaker 3 (14:43) Jiang, Zifei, Zhe Dai, Zhe Dai, Zhe Dai.

Kiran (15:10) That's good we picked up on this. Can't think of any.

Speaker 3 (15:19) So this is kind of stupid being a safe kid.

Kiran (16:50) I'm fixing it now. And then also another thing... That I want to do was get rid of two things on the... Workers page... Worker dashboard. There is no... History. So let's just get rid of it. Ah, on the worker dashboard.

Speaker 6 (17:34) I never see. Do you do to any of you know how to refresh a page?

Speaker 5 (17:39) You clicked that also cool thing.

Speaker 3 (17:42) No, like...

Speaker 6 (17:43) Refreshing... You know, like in...

Speaker 3 (17:46) React.

Speaker 6 (17:47) Like it would navigate, it would navigate into the same page like refresh it.

Kiran (17:54) I do not know. I don't know how.

Speaker 3 (17:55) It wouldn't.

Speaker (17:58) One. Help.

Speaker 6 (18:01) Gates. To the last...

Speaker (18:03) Page.

Speaker 3 (18:03) We fetch. Page.

Speaker 2 (18:09) Be honest. And guys on the landing page we still have like... Fixed data.

Speaker 3 (18:15) Okay.

Kiran (18:16) For the about and contact us.

Speaker 2 (18:20) No, no, no, you see like when you get to your word, your voice, your city, then it's like 2400 requests submitted. Yeah. That parts.

Kiran (18:29) Oh no, that's fine, that's fine. You can just leave...

Speaker 2 (18:32) Oh, we're not changing that. Okay.

Kiran (18:33) That's not important.

Speaker 2 (18:35) Okay. Can I leave at like 11 because I need to perform. All right. Cool.

Kiran (18:39) Yeah, you're writing, it's fine. Yeah, don't worry.

Speaker 6 (18:47) So, you are doing the thing when you say you want to...

Speaker 3 (18:51) Remove. I should my college.

Kiran (18:52) The history tab, yeah.

Speaker 6 (18:55) Yeah. Could you just go to the code for work at dashboard, right? And then, um... Wait, let me just go to it so I can...

Speaker 3 (19:05) Remember properly.

Speaker 5 (19:20) Feed back with all it will...

Kiran (19:22) Okay, I think I fixed it.

Speaker 3 (19:27) We just...

Speaker 6 (19:28) Don't pull it if you pull actually you can pull it's fine and then i'll just pull and then i'll just like pull it on my side and um and add the thing because i want to add window dot location dot...

Kiran (19:30) Okay.

Speaker 3 (19:41) Reload in...

Speaker 6 (19:43) After the feedback is submitted.

Kiran (19:46) Okay.

Speaker 3 (19:49) Window.k...

Kiran (19:52) Then also what else did we need to get rid of? It was the...

Speaker 6 (19:52) Just tell me the comments and comments. i don't think so.

Kiran (20:00) Was it nothing else that was redundant? It didn't do anything.

Speaker 3 (20:18) Window location dot...

Speaker (20:21) Reload.

Speaker 3 (20:21) The feedback is available everywhere let me just make sure.

Kiran (20:30) Oh, it was the Residence tab on the... Admin dashboard. Um... Onense Residence Sidebar. I mean, admin sidebar. And then I just need to get rid of residents. Cool. At touch a s. Okay. Cool.

Speaker 4 (21:27) I have a question. Now, it's just a...

Speaker 5 (21:31) Resident get... On the resident dashboard. He made like a favorite.

Kiran (21:37) They just click the home button.

Speaker 5 (21:39) So feel...

Speaker 4 (21:41) Though better than here.

Kiran (21:42) Yeah, that should just fix it. It should be fine.

Speaker 5 (21:57) Did you go? I guess you had FLA's due tonight and not tomorrow night.

Kiran (22:00) Yeah, I finished mine last week though, so I'm chilling.

Speaker 4 (22:06) For the June?

Speaker 5 (22:07) No, no, it's just that the time says midnight... On the... 19th... Which is... Tonight.

Speaker 4 (22:18) The following.

Speaker 2 (22:19) She had a soft peak.

Speaker 4 (22:20) I'm not there.

Speaker 3 (22:20) Oh my god.

Speaker 5 (22:22) 12th year is often new, but... Yeah, PC tomorrow.

Kiran (22:29) The project is tomorrow.

Speaker 5 (22:34) Yeah. Budget. You mean assignment. Yeah, that's it's more.

Kiran (22:37) Dang. I think mine's finished. I just need to finish my report or whatever they're right up.

Speaker 4 (22:39) Yeah, PC.

Speaker (22:45) Yeah. She.

Kiran (22:48) Am I writing ML? Am...

Speaker 3 (22:48) There's a suffering. Yeah. I'm.

Kiran (22:50) I writing ML tomorrow? Just crazy.

Speaker 4 (22:55) You sure were saying.

Speaker (22:57) It's...

Speaker 6 (22:58) A...

Speaker (22:59) Lot.

Speaker 3 (23:03) It's a lot. What is this?

Speaker (23:06) Yeah...

Speaker 6 (23:07) It's a little bit.

Kiran (23:26) Okay, I'm just running the tests. Um, Sam, what did you want me to update again?

Speaker 6 (23:34) Did... You, did you edit?

Kiran (23:36) Ed what? I forgot, sorry.

Speaker 6 (23:39) I was asking if you pushed, but if he just goes to resident dashboard, right?

Kiran (23:44) Yeah.

Speaker 6 (23:46) And then go through the submit review function like submit_review.

Kiran (23:52) Yeah.

Speaker 6 (23:53) Then you see what it says, I let successfully submit a review.

Kiran (24:00) Yeah, you only changed that to the component.

Speaker 6 (24:03) You know, don't change that. Just under it... Just add window.location.reload. And it's a function, so reload is a function.

Kiran (24:16) Okay.

Speaker (24:18) Yeah...

Speaker 3 (24:19) So window.location.reload.

Speaker 6 (24:21) Just so that it forces the reload when it goes back to the screen and it just like... Shows the review actually.

Kiran (24:29) All right. I'm gonna add my component though. I might as well do it.

Speaker 6 (24:38) And then if it doesn't break test, but I have a feeling it's going to break test.

Kiran (24:43) If I add the message component, I also think so.

Speaker (24:48) Yeah.

Kiran (24:49) I also think so. Okay. Okay. Okay. It did fail test, but there should be a fixable test. So it's fine. Is there any other changes that you want to make?

Speaker 6 (26:30) Well, that should be it.

Kiran (26:32) Is that it?

Speaker 6 (26:34) Yeah, the reload.

Speaker 4 (26:43) Can you please... Test out? I'm, is my... Poor request on the main... Like as me as the bridge?

Kiran (26:51) Yeah.

Speaker 5 (26:58) Okay.

Speaker 4 (27:00) Yeah... Can you just test out the cancer... Request? Like when a resident does it?

Kiran (27:11) Just quickly doing something.

Speaker (27:16) Yeah. Thank you. Yeah.

Kiran (28:31) Okay, I think it's sorted out now.

Speaker 3 (28:40) I will just change the piano.

Kiran (28:46) I haven't pushed yet, I'm just running the format... And lends quickly. Man, I'm build, just to check that it's fine.

Speaker 3 (29:05) Began state... Trees.

Kiran (29:22) Yeah, I'm just building it, and I'm going to check locally that the... Category report is fixed... Just before I push anything. So we don't have to deal with that... Headache. Okay... The numbers are correct... But the CSS isn't updated in the front-end. Let me see if I can fix that.

Speaker (30:05) Okay.

Kiran (31:10) The numbers are there but the data isn't displaying properly. Let me fix that.

Speaker (32:05) Good job.

Kiran (32:13) Okay, let's see. The main you can go if you need to. Go it's fine. We're just gonna finish up.

Speaker 2 (32:56) Okay, I'll see you guys later then. Bye.

Kiran (32:58) Yeah, bye-bye. Good luck.

Speaker (33:00) Yeah.

Speaker 3 (33:02) Bye, too. is the pure.

Kiran (36:32) Okay? I haven't done it yet. Um, hopefully I fixed it. There was a pro... There's a mix... Match. There was a mismatch in the naming for the category. So what I'm doing is I'm just fetching it directly from the... Categories... Table. But then the categories table doesn't match what's in the service requests. Like the case.

Speaker 6 (38:20) And we're fused.

Kiran (38:21) The casing in the categories table... Right? Like in the database. Those naming of the... Like fields for each category... Are mismatched from the fields in the service requests for each category.

Speaker (38:33) Okay.

Speaker 3 (38:41) Why is...

Kiran (38:42) I don't know, but I don't know, but I think some people weren't using the category or the constant duck JS file.

Speaker 6 (38:42) That?

Speaker (38:53) Right?

Speaker 3 (38:53) The constant js for also you mean the same thing.

Kiran (38:55) Yeah, I don't. Yeah. So the casing for it is as mook stuff, but it's fine.

Speaker (38:59) Yeah.

Kiran (39:02) I made it case insensitive so that... Regardless of casing, it fetches the data. Hopefully that fixes it. Yeah, I fixed it. Cool, cool, cool... Cool, cool. Cool.

Speaker (39:17) Awesome.

Kiran (39:20) Um, why is my average resolution time so bad? So crazy. Wait, what? Oh... Because it's... These were set in the future. Oh yeah, that's another thing. The dates... For closing it. Would those selected by us?

Speaker 6 (39:50) That dates for?

Kiran (39:51) For closing a request? Or resolving a request?

Speaker 3 (39:57) Yeah, I don't know.

Kiran (39:58) Because... I saw a lot of them with 31st of May.

Speaker 6 (40:05) I don't know. Yeah...

Kiran (40:10) Okay, but that's in the database, but... Like, how is it actually supposed to close? Like the date?

Speaker 6 (40:18) I don't know the close of procedure.

Kiran (40:21) Because it's...

Speaker (40:22) I...

Speaker 6 (40:23) Do know what if someone... Test... They could essentially just go to the database and change it.

Kiran (40:31) No, no, no, it is. I saw that they're like... On the 31st of May, and then makes my category report service break because those dates are incorrect. And they end the future, Lukey.

Speaker 6 (40:43) What are you only using UTC? Right.

Kiran (40:46) Yeah, yeah, they should be... It should be... let me just check. So this is the request... the admin request of this.

Speaker (40:50) Yeah.

Speaker 6 (40:58) So what field is actually like wrong is it because there are many pies. There's a sign pie close by close assigned... Ads. Close that or something like...

Speaker 3 (41:08) That. So which field is it?

Kiran (41:11) Um, let's see.

Speaker (41:15) Yeah.

Kiran (41:27) He's looking... Because... There was one that said 31st of May, that's the one that I'm looking for.

Speaker 3 (41:31) Yeah.

Kiran (41:38) Which is weird.

Speaker 6 (41:41) If you can't find it, it's been there.

Speaker 3 (41:44) Because it might be something that...

Speaker 6 (41:47) Gifts might find it when he's testing...

Speaker 3 (41:50) At UC.

Speaker 4 (41:51) I really don't give this gunner like test all projects to that extent.

Kiran (41:55) No, Adresha told me she's the only one that mocked some project. She's mocking the entire project.

Speaker 6 (42:00) Yeah.

Speaker 3 (42:04) Charge.

Speaker 4 (42:06) That's what Patricia is a cancelled.

Speaker 3 (42:10) Ha, we can only do that.

Kiran (42:15) Maybe my thing is wrong. Let me check. No, I think mine's just wrong. But I swear something said 31st of May.

Speaker (42:30) Like BLANK...

Speaker 4 (42:42) I think I can take... The- I think that's the one that- BLANK...

Speaker 6 (42:52) AUDIO But in-

Speaker 4 (42:57) AUDIO Close that- In the service request.

Kiran (43:00) Wait, I could actually use something I made, the custom report that will tell me. Hold on. Let's see. So today's the 18. See, this stuff popping up after the 18. Oh, that's April. Okay, that's April, that's fine. Yeah, it's still showing. Oh, the categories, okay. That's fine. Okay, maybe it's my co-let me see if I can, if it's that. Okay. Yeah, there was another mismatch in the... Updated... At way of handling... The date and the created at... Way of creating the date.

Speaker (46:44) Oh.

Kiran (46:45) So as two different... Dating formats were being used. So that's why.

Speaker 6 (46:56) Do you repeat that?

Kiran (46:57) So the dating formats were different.

Speaker (47:01) Yeah.

Kiran (47:01) Or the updated at and the created at and closed at or...

Speaker 6 (47:06) Yeah. That's something I noticed a long time ago. I think you're referring to some using...

Speaker 3 (47:13) Silver timestamp and others using new data. Right. Yeah.

Speaker 6 (47:18) That's something I noticed as... Soon. Well. So if you go to like, uh...

Speaker 3 (47:23) Is it it's working dashboard or something right?

Speaker 6 (47:25) It's going to be...

Speaker 3 (47:26) Up. There's a function there that tries to... Like, I forgot like it tries to stand a die, you know, a present.

Kiran (47:34) Yeah, that's what I wrote, but I'm making it even more flexible.

Speaker 6 (47:44) Yeah.

Speaker 3 (47:45) Yeah. It's for mid date.

Kiran (47:49) Yeah. I'm changing it now to be better.

Speaker (47:53) I.

Speaker 6 (47:55) But wait, isn't it already... Good for what we needed to do? Because there's only Silver timestamp and new date two straight.

Kiran (48:03) It's still... Yeah, I was getting messed up, I think, because it was as... A string. So it wasn't not fetching anything, I think. One was stored as a string. One was stored as a date. So it was kind of messing it up.

Speaker 3 (48:15) Yeah.

Speaker 6 (48:19) Yeah. Yeah. That's the two, that's the Silver timestamp and new date. date.

Kiran (48:21) Okay. No, it's fixed! It's fixed!

Speaker (48:25) You should use the.

Speaker 3 (48:26) Yeah, just use the format date.

Kiran (48:29) It's fixed.

Speaker (48:33) Okay.

Kiran (48:37) It's fixed! It's fixed! It's fixed! Yeah, it's fixed. Cool. What " are you... Doing?" okay... Mpm run format. Mpm run test. Do I need to update the tests? Obviously, of course. I'm just doing the test.

Speaker (50:34) Bye.

Kiran (50:40) Okay, I had passed all the tests. Let me just... Do one last. Like... Real test of it and see if that works and then we're good to go. While... Still working... And then the...

Category report... Also still working. Cool. And the message review. Cool. I'm just doing length and then I'll push and then we can I didn't call it there.

Speaker (52:03) I...

Speaker 4 (52:08) Mean, it is the resident one before that.

Kiran (52:12) The what?

Speaker 4 (52:14) The resident, I can't say a request, I've submitted... It. Like what I did.

Speaker (52:22) Yeah.

Kiran (52:25) Can you test it on your side?

Speaker 4 (52:29) Okay, there on the thing.

Kiran (52:32) Yeah, it...

Speaker 4 (52:33) Okay.

Kiran (52:42) Right. this is a bandage. Okay cool.

Speaker (53:34) Okay.

Speaker 4 (53:43) It seems like it does work. And then... Yeah, it's still using the alert... Which I guess you said it's okay.

Kiran (53:51) On which page?

Speaker 4 (53:52) Yeah... The resident dashboard.

Kiran (53:56) Oh I haven't, I made the change now only. So I haven't pushed my change yet.

Speaker 4 (54:04) Okay is this for canceling the request though?

Speaker (54:15) Okay.

Kiran (54:15) No, you made a window confirm. I can't do that. I don't have a... Confirm versus... Cancel. So I can't do that. My component is just... Display message. It doesn't confirm or cancel.

Speaker 4 (54:32) Okay.

Kiran (54:32) So it wouldn't be able to... Do your thing.

Speaker 4 (54:36) Okay. On the public dashboard, some of those things don't have the like... Like the request codes. I don't know if those were just... Like they didn't have that field in the database or what.

Kiran (55:14) But you could even.

Speaker 4 (55:17) So if you go on the public dashboard.

Kiran (55:18) Yeah.

Speaker 4 (55:21) Do all the open requests... Have, would like... But... Besides, i'm not sure...

Speaker 5 (55:27) Which is. Yeah, some of them are missing. That is very weird... But where did all these new requests come...

Speaker (55:36) From?

Speaker 5 (55:37) Like, I didn't see them here. 10 minutes ago.

Speaker 6 (55:41) But you request...

Speaker 5 (55:44) On the public dashboard.

Speaker 3 (55:47) Maybe it was testing. Oh, no.

Speaker 6 (55:54) I tested two, but... That was more than 10 minutes ago.

Kiran (55:57) I don't test any of them.

Speaker 5 (55:58) I didn't actually mean 10 minutes, but I just went earlier today.

Speaker 6 (56:02) So I tested two. One of them says something about water. This is the last test or something like that. Is it that one?

Speaker 5 (56:12) I see it. No, no, there's... Quite a few.

Speaker 4 (56:18) I just, I just submitted the new water one yesterday. And then I know I did the these bottles and vids. Fucking.

Speaker 5 (56:26) Yeah, I didn't like days ago. Okay, look, it's not about the day. It's I was just. Yeah, okay.

Speaker 3 (56:33) But yeah, I'm just...

Speaker 4 (56:35) Saying like in terms of, um... I don't know if it closed or what.

Speaker 5 (56:41) Now these are open the...

Kiran (56:41) Yeah, I'm just picking out code coverage again. It should be well. yeah, it's well over 80 word 85.

Speaker 3 (56:54) So now we just...

Kiran (56:56) I then I think we're done.

Speaker 5 (56:58) Wait... Where...

Speaker 3 (57:00) Do...

Speaker 5 (57:00) We get here and did you just just push something to this public dashboard... Because seabirds write some of these... Requests don't have a like button.

Kiran (57:08) I did not. resolved ones. The resolved ones wouldn't have liked buttons, no?

Speaker 5 (57:12) Yes, I would you do something in the database? No, not the result... One.

Speaker 4 (57:18) The only one on the open request.

Kiran (57:21) I don't see any without like buttons in the open requests.

Speaker 5 (57:29) Do... You think when you change something in the database?

Speaker (57:40) Thanks for your time. Thank you. No...

Speaker 5 (57:44) No. I think we can leave this. I don't think it's the biggest deal in the world.

Kiran (57:46) But yeah, let me let me see, let me just see what I can do. Hold on.

Speaker (57:47) Like.

Kiran (57:51) Let's see if... Claude can help us and just tell us what to do.

Speaker 5 (58:06) Quest Cloud.

Kiran (58:27) What are these called their quest cards or the service for quest cards?

Speaker 5 (58:33) Is all, yeah. It would be in your components.

Kiran (58:38) In the components, okay. Is it called a request card?

Speaker 5 (58:47) Yeah, request Cloud.js. That's your phone.

Speaker (59:01) Okay.

Speaker 4 (59:02) Just. Close it and see what happens. And the public... Dashboard.

Speaker 5 (59:18) Well, something else has also changed. The ward numbers.

Kiran (59:25) I didn't touch that. that's, I didn't touch any of that.

Speaker 5 (59:29) Wait, wait. So when you're good to the, you can look either on the. On the request cards... And also with the filtering.

Kiran (59:37) Oh yeah, I see.

Speaker 5 (59:40) So I... Did I fixed this yesterday... Because all you have to do is take... On the public dashboard.

Speaker 4 (59:48) I also see another issue.

Speaker 3 (59:50) So I'm on resident dashboard. So you see it's on public. Dashed... Public camera public dashboard.

Speaker 5 (59:57) Yeah. So. So... First thing you can do is you see the full to dashboard... Thing. Yeah. Yeah. Click on ward. And then you can.

Speaker 3 (1:00:07) Oh no. Who's that...

Speaker 6 (1:00:08) Actual thing is...

Speaker 3 (1:00:09) Those are... The words.

Speaker 5 (1:00:11) But you see seven nine eight zero zero one zero. Yeah.

Kiran (1:00:13) And then when you click on the filter, nothing shows up.

Speaker 3 (1:00:17) No. I think I know the issue.

Speaker (1:00:19) That's not.

Speaker 5 (1:00:21) Yeah, yeah, but I fixed this yesterday because all we had to do was grab the last three digits. So.

Speaker 6 (1:00:28) In which in which full request.

Speaker 4 (1:00:32) Was it for my...

Speaker 5 (1:00:34) I'm sure I labeled... It.

Speaker 3 (1:00:35) Because remember yesterday I said, well, there's like I don't know when but at some point some of my commits had like just disappeared.

Speaker 5 (1:00:44) Yeah.

Speaker 3 (1:00:45) That might be the same issue. So where was your full...

Speaker 5 (1:00:49) I'm going to check now. That's...

Speaker (1:00:52) Why.

Speaker 3 (1:00:54) If it's round about which one was mine that disappeared. Let me just look. If it's round about feature resident feedback, right?

Speaker 5 (1:01:02) And then it's probably something.

Kiran (1:01:04) I'm gonna see if Claude can just fix it for us.

Speaker 5 (1:01:10) Oh, I call it. I tested...

Speaker 4 (1:01:13) Submitting a request as a resident and then canceling... It. So as soon as you submit it, as show up on the public dashboard. And then if I go on my... Resident dashboard and cancel... It, it removes it from the public dashboard. Yeah.

Speaker 5 (1:01:32) Can you find the way you'll put the best. Yeah. I want... It's called the swoonlight down and on the award-close on public dashboard. Number 24. This was literally all that it did.

Kiran (1:01:44) Okay, I'm fix to get now. Hold on, hold on.

Speaker (1:01:45) So.

Speaker 5 (1:01:51) Okay. So that's the last three digits.

Speaker 3 (1:01:54) That's like long after mine. So like I'm not sure why it was also a disadvantage.

Speaker (1:02:01) That's crazy.

Kiran (1:02:02) I'm just gonna fix it now... And in the routing block, okay?

Speaker 5 (1:02:10) You know why don't we check everything again because you know we just noticing this now. I'm...

Speaker 3 (1:02:18) Also going to like look at this but I'm just making sure what I read last didn't get you. Do anything. But I'll be adding... Anything. Get... Signed.

Speaker (1:02:33) Well, okay.

Speaker 5 (1:02:34) Yeah, that makes sense. What if all trend doesn't work either?

Kiran (1:02:38) Yeah, I'm gonna draw fix it nor rot now.

Speaker (1:02:39) Well, forward.

Speaker 3 (1:02:44) Just make just everyone else checked like what you had before also wasn't removed. Turned away yesterday.

Speaker (1:02:57) I am. Oh...

Speaker 4 (1:02:59) That would have been quite a lot. I'm going to be debugging stuff... There. Now I'm just listening.

Speaker 3 (1:03:08) Come to power. Where if also your things have been...

Speaker 4 (1:03:12) Removed? Is up dust or here?

Speaker 5 (1:03:14) Yeah, I'm here. Just take your things as well.

Speaker 4 (1:03:18) You know, we'll check the whole scope of the project.

Speaker 3 (1:03:22) No, I mean code...

Speaker 6 (1:03:24) Because you find that you fixed some edge case a bit late and then it was a month.

Speaker 4 (1:03:30) Just me, such cannot be the case.

Speaker 5 (1:03:33) Brother, I'm witnessing it now. Thank you. Thank you. So, if...

Speaker 3 (1:03:40) It...

Speaker 6 (1:03:41) Truly truly believe.

Speaker (1:03:45) Yeah... Yeah.

Speaker 2 (1:03:47) I never had system breaking news stories...

Speaker (1:03:50) Man. I...

Speaker 2 (1:03:52) Made sure the system was breaking news stories.

Kiran (1:03:56) Okay.

Speaker 6 (1:03:58) Next thing you know...

Speaker 3 (1:04:00) The next thing you know, gifts is the word you said you did this. When he tries to do it, it just breaks.

Speaker 4 (1:04:09) I'm so aware that gift is not gonna do so. She's busy. Okay. It is a big gift. To be worried about a third year student with one. I finished up...

Speaker 5 (1:04:19) With the one checking Taylor.

Kiran (1:04:20) Fixed...

Speaker (1:04:22) That's... Nice.

Kiran (1:04:24) It. I fixed... It. I fixed it. the resolved text was inconsistent. The status. Some of it was capitalized. Some of it was lowercase.

Speaker (1:04:26) I love it for it.

Kiran (1:04:35) So the extra... Request that you were seeing... Were resolved, but we didn't, we couldn't identify them as resolved because of the... Status Casing, being inconsistent.

Speaker 5 (1:04:46) Hey, come...

Speaker 6 (1:04:50) On. No, this issue was about...

Speaker 3 (1:04:52) The one he knows.

Kiran (1:04:53) Both, both...

Speaker 5 (1:04:54) Yeah... I would... Do issues.

Kiran (1:04:59) Both, both.

Speaker (1:04:59) I see.

Speaker 6 (1:05:01) I see.

Speaker (1:05:02) Okay. Cool. Cool.

Speaker 5 (1:05:06) I didn't notice any other... Problems anywhere else. Did you guys? It doesn't take just now from checking.

Speaker 4 (1:05:16) I did. So when the resident closes a request... It shows domains. I think when the domain was like testing, closing a request... The reason... It shows like just a message they're saying testing the closing reason. So I'm not sure.

Kiran (1:05:34) It's not okay. And it does let you... Put the message anyways, but it's just not actually working.

Speaker 4 (1:05:46) Yeah, like it just appears there... When I... Cancel your request as a resident. I'll just like test it in.

Kiran (1:06:06) Okay, let... Me go check that. So... Where is this?

Speaker 4 (1:06:12) On the resident dashboard, just submit the request. And then when it appears on the... Resident dashboard, just click. Can't to request and then. Yeah, you'll see there's a message that appears... At the bottom like closed reason... Message...

Kiran (1:06:34) So for the...

Speaker 3 (1:06:36) Actually...

Speaker (1:06:36) When you...

Speaker 4 (1:06:39) Yeah it just shows in... A message...

Kiran (1:06:43) Resident closing their request. Wait, a resident closing their own request, they can't do that.

Speaker 4 (1:06:48) They can like canceling a request not closing canceling yeah in this large so after you submit your request just go to it on the resident dashboard...

Kiran (1:06:50) Oh, canceling, canceling. Okay. Okay. Okay, I'm seeing it now.

Speaker 4 (1:07:06) And then you see the...

Kiran (1:07:11) Okay... Then on the resident dashboard, let me see.

Speaker 4 (1:07:25) Oh no... No no I'm actually wrong the closed the closed requests were what like those are requests that you guys closed when you are testing if a worker can't close a request so to actually remove the entire request properly...

Kiran (1:07:28) Is it working? Okay, so it's fine.

Speaker 4 (1:07:45) So I think because I'll see yeah so I think it's fine yeah yeah because it from the public dashboard. disappears from there also...

Kiran (1:07:48) Okay, cool. Okay. Um... Yeah, guys, keep testing and I'll make the changes as we need to...

Speaker 4 (1:08:06) So as what you fixed on... The deployed.

Kiran (1:08:10) Not yet, I'm still waiting for us to find anything else that's broken. Before... I push this.

Speaker 5 (1:08:18) But I mean it worked on your side.

Kiran (1:08:19) Yeah, but I want to do like a large one with everything so everything's done.

Speaker 5 (1:08:22) No, no, I'm just... I'm just asking if okay cool.

Kiran (1:08:25) It worked.

Speaker (1:08:26) Yeah.

Kiran (1:08:26) It worked. Which I think...

Speaker 5 (1:08:28) One more question. So... Today we have a... Sprint review... And then... We submit... Next week.

Kiran (1:08:36) Does day...

Speaker 6 (1:08:37) No, we submit now.

Speaker 3 (1:08:38) It's just that isn't there's data videos or Friday data videos and stuff.

Speaker 4 (1:08:43) Yeah, they say like videos and I don't know documentation something like that.

Speaker 6 (1:08:47) Yeah...

Speaker 3 (1:08:48) I just saw that all the group. So I'm guessing... Today after today we're not allowed to work on the code I think. As far as I'm aware of another.

Kiran (1:08:58) Yeah, I imagine.

Speaker (1:09:00) Yeah...

Speaker 5 (1:09:01) So what like just videos of us... Using the app to show how it...

Speaker 3 (1:09:06) Works. I'm assuming so.

Speaker (1:09:10) Okay. Kuku.

Speaker 6 (1:09:12) Let's check main group.

Speaker (1:09:16) It's...

Speaker 3 (1:09:16) Designed. Also, I'm still getting...

Speaker (1:09:24) Different.

Speaker 3 (1:09:24) It's the app. And this one is one. So that we have some of the changes I don't think that would.

Speaker 4 (1:10:03) Most of those using one thing. So like... Once the request is closed... You can still like it on the resident dashboard. That's something I missed.

Speaker (1:10:14) Oh, I don't...

Speaker 4 (1:10:16) Think it does anything but. Like... I think the liking features be disabled.

Kiran (1:10:24) Oh, that's fine. That's not such a big deal.

Speaker (1:10:28) Okay.

Kiran (1:10:29) I think there's going to be like a reflective as well.

Speaker 3 (1:10:29) So.

Kiran (1:10:33) Like, oh... If we hadn't another month... How would we improve the project? I'm sure there's something like that... For this project. So it's not such a big deal.

Speaker (1:10:49) So.

Speaker 3 (1:10:50) Why do some of... Them? Also, it's that thing where like you said, um... You said the names aren't linking right? Like in the dashboard like some of them don't show the... Tags like it's submit or anything like that.

Kiran (1:11:08) Yeah, I fixed that now though.

Speaker (1:11:11) For current.

Kiran (1:11:12) Is this on the public dashboard?

Speaker 6 (1:11:12) And then the minutes.

Speaker 3 (1:11:15) There's also a dash over here.

Speaker 6 (1:11:17) Is that the municipality?

Speaker 3 (1:11:20) So. If you go to public dashboard... It's going to be the world and then the word number. And then there's a dash. So I'm guessing that's a place for some is that mean it's a penalty?

Kiran (1:11:31) That is supposed to be... City, I believe, but I fixed... That on my side.

Speaker 3 (1:11:36) So what did you give?

Kiran (1:11:38) It's just JHB, like the city Johannesburg.

Speaker 3 (1:11:43) Do we have we have that right?

Kiran (1:11:45) I, well, I made it that now.

Speaker 3 (1:11:48) Or because I thought it would be means that since there is municipality in our database.

Kiran (1:11:49) So now it's working. It works. I'm sure I'm fetching from the database. I don't know, but...

Speaker 3 (1:12:00) So is it just... Saying CHB or is it saying like, "Well... I think it's in the database."

Kiran (1:12:07) Dot, it's dot jhb-city of jahannisburg.

Speaker 3 (1:12:13) Okay, let me just check if that's in the database. Yeah, it's the... Essay, the municipality name.

Kiran (1:12:24) So that's fine.

Speaker 3 (1:12:26) Yeah. Yeah, so it's actually locally and it's fine. I'd sweet.

Kiran (1:12:32) I haven't run...

Speaker (1:12:32) Oh...

Speaker 3 (1:12:33) Can I ask you question? When it's displaying this name, is it a way that in the database it's saved as as you kiss the end and it's changing it to local time.

Kiran (1:12:42) Yeah. I made it loose so that it doesn't matter.

Speaker 4 (1:12:50) Someone, again, as a... Worker who is logged in as a worker and assigned... One at the bottom and then assigned one of my requests. Like the water man's request.

Speaker 3 (1:13:05) Okay. I'm working on it. So I just claim which... One? I'm not...

Speaker 4 (1:13:16) Saying it. Yeah.

Speaker 6 (1:13:20) Yeah, I cleaned it.

Speaker (1:13:22) Okay.

Speaker 5 (1:13:26) I'm going to see something.

Speaker 4 (1:13:27) Okay, it's assigned. Messaging works. Okay. Yeah. I just wanted to see that I couldn't cancel.

Speaker 6 (1:13:40) Okay. I changed the test to result.

Speaker 3 (1:13:44) But I'd feedback.

Speaker 5 (1:13:48) Okay. I just need to refresh.

Speaker (1:13:51) Alright.

Speaker 3 (1:13:52) We should have used that list... For that point, but it's too late to implement...

Speaker 4 (1:13:57) It. Use the...

Speaker 3 (1:13:59) Listener.

Speaker 4 (1:14:01) Yeah.

Speaker 3 (1:14:03) Because the worker dashboard uses it. Listener. So like... Whenever the database changes, at least for those that we are interested in, it like refreshes the page.

Speaker 5 (1:14:11) Yeah.

Kiran (1:14:12) I also realize I should have been doing that as well.

Speaker 3 (1:14:16) Yeah. Yeah. Hopefully he... Hopefully doesn't see it because the only thing that's that you'll see is when you're doing feedback, but we just a convention that with the reloading right now.

Speaker 4 (1:14:27) Okay, so bit to the rest.

Speaker 3 (1:14:30) I mean, no, like.

Speaker 6 (1:14:32) Okay.

Speaker 3 (1:14:40) Okay, I need to look on the dashboard side as... Well. Uh. Here I am.

Kiran (1:14:48) Yeah.

Speaker 3 (1:14:50) Can you just go to work a dashboard, right? And where did I make a choice again? Probably coming stuff up there, I think.

Kiran (1:15:00) The WCA dashboard, okay?

Speaker (1:15:03) Yeah...

Speaker 3 (1:15:03) I'm just going to look a little bit. Okay, yes... So just search just for rick.com and check it. Because I only changed... It for what was the resident dashboard I forgot the other. Did you get...

Speaker (1:15:25) It?

Speaker 3 (1:15:25) Record comment yes. Okay, so you found it right.

Kiran (1:15:31) Yeah.

Speaker 3 (1:15:33) So you see... There's like it's a whole essentially... Binary expression, like that's it like that status is equals to status the closed. At the top right... Can you see that?

Kiran (1:15:49) In worker-board.js or the back-end file.

Speaker 3 (1:15:53) No, we'll go dashboard the JS.

Kiran (1:15:57) I don't see it.

Speaker 3 (1:15:59) Are you at rick.com?

Kiran (1:16:01) Yeah, Rek.comment. Yeah.

Speaker 3 (1:16:04) Okay, so... What is that? What is what is like in that? Like is there a type of recto trading any with it? So about the two lines above that there's a recto status is equals to status dot closed. Yeah, so could you... Put that for specifically that could you just enclose it in in brackets right and then do an off like an all operator and say recto status is equals to status dot resolved.

Kiran (1:16:40) Yeah, I get it. Make sense. I see why.

Speaker (1:16:43) Maybe?

Speaker 3 (1:16:45) Yeah, because right now it's not showing the rating... And reviews... In worker.

Kiran (1:16:50) Okay. Okay.

Speaker 3 (1:16:54) I'll just try to take a picture and show you right now. How do I do this now?

Speaker 4 (1:17:03) I just lost the question quickly. So when a worker has resolved a civilized.

Kiran (1:17:06) Yeah.

Speaker 3 (1:17:13) Can you just check if it's like that?

Kiran (1:17:16) I'm fixing it. Yeah, I'm running it locally now.

Speaker 4 (1:17:22) No, no worker resolves a civil request. The messaging feature is still there. Is that like... I don't know how did you as it does a worker... Is a worker the one who? Like this is the one you're looking from the side.

Speaker 3 (1:17:41) Could you repeat that I dream?

Kiran (1:17:42) Not do. I did not implement anything like that.

Speaker 4 (1:17:46) So you know you resolved that... Service request the worker?

Kiran (1:17:47) No, I get what you're saying. I get what you're saying, but I didn't do anything for that.

Speaker 3 (1:17:51) Yeah, I did.

Speaker (1:17:55) Yeah. I don't understand. Yeah.

Speaker 4 (1:17:56) There's something you can see. I sent a message even though it is resolved.

Speaker 3 (1:18:02) Yeah.

Speaker (1:18:04) Yeah. I'll send... The... The... Message.

Speaker 6 (1:18:05) Messaging works until it's closed specifically.

Speaker 3 (1:18:11) Okay. Yeah. Okay. So I think you can also actually just even if you just find where the messaging thing is.

Kiran (1:18:18) Oh yeah, um, Sam, I think it worked.

Speaker 3 (1:18:24) Yeah. So, okay. Can I just check on the... I'm taking a video right now? Just check the my screen to quick. What is it... From? Yeah. So is it something like this?

Kiran (1:18:41) Hold on, let me see. Yeah.

Speaker 3 (1:18:49) Right. Then I think that should be... Right.

Speaker (1:18:52) See you.

Speaker 3 (1:18:55) Then it should be properly. Reason. Yeah. And it's also the public comments that it's... Because most of it you are still under the assumption that closing was like something that needed to be done before it can actually be seen as closed in that sense. So... Hey. Yeah. What it is. Let me actually see if... Where I can find the message thread thing. Hello, message thread conversation with President.

Speaker (1:19:32) It's saying, well... If you...

Speaker 3 (1:19:37) Status is not closed... And share that update status. Oh yeah... You could probably put it in like an "F statement" in the react code. And an "F statement" but like a ch "annel" or something like that. Public comments as well because... Not public comments, the public comments. Wait a minute. I'm gonna go right there, I'm not. As it working out, it's working.

Kiran (1:20:26) No, it's not what's... no, it's not working. It just won't. What?

Speaker 6 (1:20:32) What's not working?

Kiran (1:20:33) The public dashboard thingy that I just fixed. okay, then the words are fine.

Speaker 6 (1:20:37) Is it the numbers or is it what?

Kiran (1:20:43) But it's... Showing stale requests for some reason.

Speaker 6 (1:20:48) I'm confused, is it for filtering?

Kiran (1:20:51) No, no, just the open requests like... Area, it's not showing some of them with like buttons...

Speaker 3 (1:20:56) Yeah. That's also just not shown in the current one that's in deployment. You can see the statuses of some of them... And you can see the likes for some of them. But... I bet the statuses part was there. It was something that you just picked.

Kiran (1:21:14) I also thought I just fixed it.

Speaker 3 (1:21:19) Let's check... The database and... Let's see if statuses 10. Let me see what request ID is. I can't do that. Oh, you can't.

Speaker (1:21:42) Oh, it's on the one.

Speaker 3 (1:21:44) No, you can't check... Request ID. Let me just. What was that? How do I do this? Description maybe. Maybe for sure, it as well.

Speaker (1:21:58) Yeah... Yeah. Yeah.

Speaker 3 (1:22:02) This is a submission for the Chisitian.

Speaker 4 (1:22:17) Are you checking like the fields for that's a request?

Speaker 3 (1:22:22) Okay. Almost the try to see if like something is odd in like the document and the document. Yeah, I don't know.

Speaker (1:22:29) So -

Speaker 3 (1:22:30) Everything looks...

Speaker 4 (1:22:34) Fine. - It's weird because it can't even be that like some... Maybe because there were some bits it before. -

Speaker 3 (1:22:42) We think so. -

Speaker 4 (1:22:44) No, the thing is... There's others like the potholes on next with on the 15th. That one... Seems fine. -

Speaker 3 (1:22:54) Potholes on that 15th. - Oh yeah. Yeah, that one looks fine, but we just not show why the other one is an odd one.

Speaker 4 (1:23:07) I think...

Speaker 5 (1:23:10) Ash...

Speaker 4 (1:23:13) Everyone, okay, I'm gonna log in with a different resident to Kant and then submit to a quest. - I don't see how it appears on the public dashboard.

Speaker (1:23:25) Also -. -

Speaker 3 (1:23:27) Wait, Amanzi test is also not sure.

Speaker 6 (1:23:31) I - can't...

Speaker 4 (1:23:34) Do that. - Sorry?

Speaker 6 (1:23:35) To - recently resolved, like to let me-

Speaker 3 (1:23:37) I - end up public dashboard does recently resolve just not show like likes... And like the state isn't anything like that.

Speaker 4 (1:23:45) If - it's resolved, it shouldn't show the like. Or status. It's just like, yeah, because it's like... It's basically closed.

Speaker (1:23:58) Okay.

Speaker 3 (1:23:58) Right.

Speaker 6 (1:23:59) Tell us when you love leaf.

Kiran (1:24:05) I'm trying now. See you.

Speaker (1:24:06) Thank you.

Kiran (1:24:14) It should work now, hopefully. Okay, every fresh work, everything is work... Everything just work. Everything is not just working. What the heck? There's still requests here that aren't... Displaying what buttons. Maybe in my request card is the problem.

Speaker (1:25:10) Thank you.

Kiran (1:26:05) Okay. Yeah, I work. Yeah, this doesn't work. We can just call it, but... Hopefully it does work.

Speaker 4 (1:26:36) Also guys, when you submit the request, is it just me or like sometimes I have to refresh the page... Before being able to. I can just load forever.

Speaker 6 (1:26:49) Right?

Speaker 4 (1:26:51) So like when you submit the request... Like sometimes it just loads forever.

Speaker 6 (1:26:58) Yeah, I saw that as well yesterday and I did it as a short error. Like after you submit it and then it tries to redirect you to resident dashboard, it just stays wide, right?

Speaker 4 (1:27:08) So this one, like I'll upload the image, type the description. When I click on submit, it just loads. But it stays on the same page. And then after I refresh I'll to redo everything and then it's probably.

Kiran (1:27:24) Once.

Speaker 6 (1:27:25) So do you know what you did before? Like will you submit it or something?

Speaker 4 (1:27:34) Was I?

Speaker 6 (1:27:36) So, like, I don't know, like, what, like, did you just go to submit request and then like, as soon as you tried to submit, it just didn't work.

Speaker 4 (1:27:43) Yeah, like it just loads... As in like the submit request button when I click on... It, it shows that loading thing... And nothing happens. And then I refresh and then it clears the page. So like the request, everything I typed in disappears. And then I read like... Enter everything. And then I click submit and then it submits properly.

Speaker 3 (1:28:06) Yeah, I'm not sure... What the problem...

Speaker (1:28:07) Is.

Speaker 6 (1:28:08) Maybe if you open console, we'd see, like, we'd see if like, you're actually just close...

Speaker 3 (1:28:13) There.

Speaker 4 (1:28:14) Yeah, like, you're done. Okay, I'll try submit another one.

Speaker 3 (1:28:17) Yeah, hopefully, hopefully...

Speaker 6 (1:28:18) That's it again.

Kiran (1:28:25) I'm gonna test it out as well now... Because this thing is not working and I think I'm just gonna give it up on this.

Speaker 4 (1:28:33) Like, I don't understand these are the, because every like request that I do submit, everything shows up properly on the public dashboard. Yeah, I'm not sure like.

Kiran (1:28:43) Maybe it's all the stale or like not stale... Like in our project style, but in the DB like it's... Like incorrect or your stored service requests. That's why...

Speaker (1:28:53) Yeah.

Kiran (1:28:54) I did think we should maybe... Clear the database... But I don't know how you guys feel about...

Speaker (1:29:01) I'm...

Speaker 4 (1:29:01) Sure...

Speaker (1:29:02) That.

Speaker 6 (1:29:03) Yeah, we should do that of course, but like we'll come also. I don't think I'm going to show what the problem because the one he just submitted as well, right? It still doesn't show status and I like. The one he just submitted. What did... You just.

Speaker 4 (1:29:20) Overflowing pins.

Speaker 6 (1:29:22) Oh, no, actually it shows. It just doesn't show... Priority only.

Speaker 4 (1:29:31) That's because it shows on my. It's a good card.

Speaker 6 (1:29:35) Yeah, mine only shows status of me, but it doesn't show the priority. Like. No, in the in dashboard.

Kiran (1:29:44) See, good works for me.

Speaker 3 (1:29:44) Public that.

Kiran (1:29:48) They're submitting our request.

Speaker 3 (1:29:48) Now.

Kiran (1:29:49) It works perfectly fine for me.

Speaker (1:29:50) What?

Speaker 4 (1:29:52) Like you.

Speaker (1:29:54) Okay.

Speaker 6 (1:29:57) Like some of them electricity now. This is a electricity. This electricity is a huge problem. Doesn't show priority. That priority critical thing.

Kiran (1:30:06) I just created it though.

Speaker 4 (1:30:09) Which one is this? This is a submission for electricity.

Speaker 6 (1:30:14) Oh, okay. So I'm getting it. That's priority. Take time to actually be said. Okay. Yeah. And then it's fine.

Kiran (1:30:23) I just made it that now. Okay, so it's fine.

Speaker 6 (1:30:23) That's fine. Yeah. Because if it took time, then it would make sense why it wasn't... Showing immediately.

Kiran (1:30:32) Okay. Cool.

Speaker 5 (1:30:33) So I'm...

Speaker 6 (1:30:37) Refreshing the dashboard now... It... Still doesn't...

Speaker (1:30:40) Show...

Speaker 4 (1:30:40) What's on the display...

Speaker 6 (1:30:42) So, it shows status and then the like and then it doesn't show the priority critical if...

Kiran (1:30:42) Electricity. The electricity is a huge problem. Please, please, fix this.

Speaker 3 (1:30:54) You just made it that.

Speaker 4 (1:30:55) Yeah, when you just like made... It, I think only when you like it then I don't... Know something like... That.

Speaker (1:31:04) And I don't know.

Kiran (1:31:06) Okay, no, no, no, no, no, no, on my side.

Speaker 4 (1:31:06) Public dashboard.

Speaker (1:31:09) Oh...

Speaker 6 (1:31:10) I didn't take it.

Kiran (1:31:10) When can I just say I figured out. So... On my side, right... On my local, my local one, it's displaying the new, um, the one that I just submitted and it's showing the status as open.

Speaker (1:31:16) Yeah.

Kiran (1:31:25) There's no priority, but the like button is there.

Speaker 6 (1:31:29) Yeah...

Speaker 3 (1:31:29) So I'm going...

Speaker 6 (1:31:31) We should make it default to priority low because I just clicked it twice right so I did the like and then it should priority critical right. But then I unlike it, it went to priority low. So I think all of them should have just defaulted to priority low... If it's like zero. Like when you, I think I like it when it's like that. Because right now right. Yeah, when I unlike it, it shows this priority low. But like, usually when it's zero likes and no one has liked it yet, it just shows nothing.

Kiran (1:31:59) Oh, so the determining for whether it's critical or not is a bit bad.

Speaker 6 (1:32:05) Yeah, it essentially only determines after someone has interacted with the like button at least once. I'm guessing that's how it's doing it.

Speaker 5 (1:32:17) You know, the other thing that's weird about this is that... When I go to my admin dashboard... And I can see the assigned priority as medium. But what you're saying is right, like when you like it, it goes to critical when you unlike it goes to low.

Speaker 6 (1:32:33) Yeah, I think...

Speaker 4 (1:32:34) That's and so it's not a percentage thing. So there's only like 10 people... Or 10 residents... In the database, like 10 unique ones. 20% of that... Is like only two people.

Speaker 5 (1:32:52) Oh, and the thing is...

Kiran (1:32:53) So you need to double down on the on those parameters so that it also considers it making everything critical is unreasonable, basically, with at least at least one like.

Speaker 5 (1:32:54) I'm not even a resident. So that makes sense.

Speaker (1:33:11) Okay. Yeah.

Speaker 4 (1:33:13) We're...

Speaker 6 (1:33:14) Having fun with this thing was. I'm so huge. So what makes something low and what makes it medium? Because... I've do you're saying you see it as a medium.

Speaker 4 (1:33:23) So I'm saying it was just like the total number of residents...

Speaker (1:33:27) In...

Speaker 4 (1:33:28) The database.

Speaker 6 (1:33:30) I...

Speaker 5 (1:33:32) Was just saying I can see on the admin dashboard that I can change the priority... And what it is right now is medium. Well, that's what it shows here. Let me see. It's updated.

Speaker 4 (1:33:45) Yeah, admins can... I think that was like... Some feature. They can like over it. But I'm seeing another, I think there'd be another issue because if... A resident just goes and likes it again, it's going to refresh... All of that.

Speaker 6 (1:34:06) So maybe that window navigated refresh was... No... In resident dashboard. No, no, no, in resident dashboard. It's fine.

Speaker 4 (1:34:16) No, no, something like if an admin or worker... Sets a priority level... And then let's say they make it critical. And then a resident owes and unlikes it. Or residents go and unlike... That service request... It's going to become low...

Speaker (1:34:35) Again.

Speaker 4 (1:34:37) It's like it doesn't... I don't know, what is it admin setting the priority level that's a mic. And force it there and like force other... Like force it to not change.

Speaker (1:34:51) In your.

Speaker 4 (1:34:54) So I'm saying that would be an issue.

Kiran (1:34:55) Actually, can I just say I think the percentages is an integral idea. If you have 100,000 uses that means you need 10,000 people.

Speaker 4 (1:35:00) Yeah.

Speaker 6 (1:35:08) I think... You just use percentages, but you use it in like...

Speaker (1:35:16) The...

Speaker 6 (1:35:16) Total likes for everything.

Kiran (1:35:18) No, no, no, no, no, because... It doesn't consider which location you have, which where your location is.

Speaker 6 (1:35:24) Like the word you use words there... Or municipality because municipality.

Kiran (1:35:28) That's a lot of, that's... I think removing the percentages is just easier and making it hard coded.

Speaker 5 (1:35:35) Yeah, we just let you know the admin assigned the priority.

Speaker 4 (1:35:42) But the liking was. Hey, I don't know. Like in what is it and being able to like it was a whole point on like... Escalating.

Kiran (1:35:56) I'm just going to make it so that it's numbered and not percentage base instead.

Speaker 4 (1:35:56) The priority. Okay, then what numbers are you gonna choose?

Kiran (1:36:04) Zero to four for low... Five to nine for medium, 10 to 19 for high, and 20 plus for critical.

Speaker 4 (1:36:11) Okay, and then we'll just say that, um... I could be one of those things that if we had a lot more time... Then we'll be able to like...

Kiran (1:36:20) The problem with the percentages is that... You need... People, everyone's location, that's the meeting alike.

Speaker 4 (1:36:28) Yeah, that's true.

Kiran (1:36:30) And then also... Realistically, are you going to get that many people liking it versus just viewing it?

Speaker (1:36:37) Ooh.

Speaker 4 (1:36:40) Yeah, I would have to consider like the population in like a specific... Ward maybe... And... Like, yeah, there'd be a lot more like things or conditions...

Kiran (1:36:53) Yeah, it'd be too difficult to make something critical, I think, even though some people might say that's a good thing, but I disagree.

Speaker 5 (1:36:53) To, to, to, to, to.

Speaker (1:37:05) Yeah.

Kiran (1:37:08) Okay, this should fix it. If there is a lint arrow with this... I'm going to ignore it because... Of the... Way that it works. It's supposed to have this arrow. So just leave it.

Speaker (1:37:26) Bye.

Kiran (1:37:49) Okay... Let's just we're done. We're done. Guys, we're... Done. Let's just call it. We're done. We're cool.

Speaker (1:37:54) Yes.

Kiran (1:37:56) It's cool. Let's we're done. I fixed it. It should be what it will be working. We can completely clear the database if you want. I don't know how necessary it is, but we could.

Speaker 4 (1:38:14) I probably should... But... Like, I don't know.

Kiran (1:38:17) Because a lot of these requests are problematic to be honest.

Speaker 4 (1:38:18) Like, I said...

Speaker (1:38:22) You know it. Yeah. Yeah.

Speaker 6 (1:38:24) We might be because something...

Speaker 4 (1:38:25) Was good.

Speaker (1:38:28) It's also so.

Kiran (1:38:37) Yeah, I'm just going to... Make this pull request and then we're done.

Speaker (1:38:42) Okay. Yeah. Yeah.

Speaker 5 (1:38:49) I got to go... Guys. I'll see you guys soon.

Kiran (1:38:52) Alright.

Speaker 5 (1:38:53) Two same.

Speaker (1:38:55) Okay.

Speaker 6 (1:38:55) Wait, actually, let me just read a bit and then we just... Did you deploy.

Kiran (1:39:00) Doing it now. I'm just finishing all the tests so that everything works.

Speaker 6 (1:39:06) I just want to make sure that it doesn't crash the whole soul of anything.

Speaker 3 (1:39:12) Because then yeah, we can't rest in...

Kiran (1:39:13) Yeah. Now I get it.

Speaker 6 (1:39:17) Constructs.

Kiran (1:39:25) Yeah, this was a long, long project. Oh my god.

Speaker (1:39:29) Yeah, yeah.

Kiran (1:39:30) Are you also, I'm doing software development project next semester as well. It's the exact.

Speaker 6 (1:39:35) Software development...

Kiran (1:39:37) Yeah, it's the same thing.

Speaker 4 (1:39:38) Is DP.

Speaker 6 (1:39:41) And we have operating systems.

Kiran (1:39:43) The exact same thing, but just note... I think it's just the project is no theory.

Speaker 4 (1:39:49) Yeah, and it's I guess it is a lot bigger... In the song.

Speaker 6 (1:39:54) No, but I feel like that's way way better.

Kiran (1:39:56) It's going to be, I think it's going to be really easy to do.

Speaker (1:39:57) I way better.

Speaker 6 (1:40:00) Yeah, because like the whole problem right now is this that we have too much things... Too, too much things... Because S.D already has a theoretical side and that's a lot.

Speaker (1:40:10) That's... Fine.

Speaker 6 (1:40:11) So I... Just better lower.

Speaker 4 (1:40:17) Tendon to me, one thing is that. CP...

Speaker (1:40:21) You know...

Speaker 6 (1:40:21) I don't...

Speaker 3 (1:40:22) Think so.

Speaker 4 (1:40:23) Well, I have to find... Two other people.

Speaker 3 (1:40:27) Yes, sir.

Speaker (1:40:32) Yes, sir.

Speaker 3 (1:40:32) What is this?

Kiran (1:40:40) Okay, I made my commit. If the lint era is there, just accept it. It's fine.

Speaker 3 (1:40:43) All right. No, let me just go to get hard to look at.

Kiran (1:41:00) There's no mudge errors, then I think it's cool.

Speaker (1:41:05) Yeah.

Kiran (1:41:36) And then yeah, let's clear the DB why not. A fresh start.

Speaker 3 (1:41:40) Yeah.

Kiran (1:41:53) Sam, can you clear your buckets for the storage of the images?

Speaker 3 (1:42:00) Right... Let me just log in... Back, please. So can you, please. Then to take a bit.

Kiran (1:42:44) Okay, my changes are being merged into it now. Well, it's deploying at least. No, it won't deploy because of Lent, won't it? It's not going to let it deploy. Oh my...

Speaker 6 (1:43:01) Just just fix the link because I checked what it is. It's essentially just... Like your if statements... Not being... In the same line or something like that.

Kiran (1:43:11) No, no, no, no, it's not that. It's a exclamation mark. Wait, what?

Speaker 6 (1:43:17) Yeah, you can just change it to the double-edged... Like, exclamation mark double equal sign.

Kiran (1:43:22) Yeah, no, but my... Curly brackets... I changed those... But I guess... It's not changed.

Speaker (1:43:30) Yeah.

Kiran (1:43:31) That's weird.

Speaker 6 (1:43:33) So the curly braces on the images...

Speaker (1:43:37) Check. Clickings...

Speaker 3 (1:43:42) On the clearness... On the thickness, two vector, dedification and backblaze. Where was this...

Speaker (1:43:59) Thing? I'm really looking.

Speaker 6 (1:44:07) Turn your phone...

Speaker 3 (1:44:09) Turn it to the chat room. Okay, dash.

Speaker 6 (1:44:41) Wait, I'm confused what this logic is for.

Kiran (1:44:45) Hold on... I'm just... I reverted my pull request quickly. No, no, no, no.

Speaker 6 (1:45:08) I think essay will distort the number. Is it not?

Kiran (1:45:13) Yeah, no, it's taught as both a word and a string. That's what I changed.

Speaker 6 (1:45:14) Read them.

Speaker (1:45:18) Oh.

Speaker 6 (1:45:21) Okay, I see. And public dashboard expects a string of the place I go.

Kiran (1:45:25) Yeah... That's the problem.

Speaker 6 (1:45:29) Then should you not just take a type of and then like decide on the operator, because right now it's just checking if it's not null, right? Like a check like type of is equals to... String. And then if it's not string, apply that string function. Open stack. Tell me.

Speaker 3 (1:45:57) Let me just write it down like what I think... Type of... Data. Just say.

Kiran (1:46:14) Yeah.

Speaker 3 (1:46:15) It equals to just what you think. It equals. Just to. I think... It's... String. Then it's data. Let's say...

Speaker (1:46:28) What?

Speaker 3 (1:46:31) That's a channel you are going to... Then if not, it's string... Data.sa.

Kiran (1:46:43) Okay commit.

Speaker 3 (1:46:43) There's the movie. You can just check Genro chat.

Kiran (1:46:50) Yeah, now that's what I have let's do I have...

Speaker 3 (1:46:50) That's what... I want. Yeah.

Speaker 6 (1:46:58) No, I just wanted to do this thing. Stimulate from. Please. Did you clear the whole database? I'm clearing everything here.

Kiran (1:47:34) Yeah, I'm gonna do it now...

Speaker 3 (1:47:37) I'm shooting the lead.

Speaker 6 (1:47:46) I just. Oh, there's two. It's so long as... Well. I'm just deleting the collections.

Kiran (1:47:58) It's not letting me delete the collections. It's just frozen for some reason.

Speaker 6 (1:48:03) I'm not deleting like the user one right.

Kiran (1:48:06) Ah, delete. Ah, it doesn't matter.

Speaker 6 (1:48:09) Yeah, because... We needed we needed to test.

Kiran (1:48:12) Okay.

Speaker 3 (1:48:14) And I don't want to be.

Kiran (1:48:16) Let's just... Delete the assignments.

Speaker 6 (1:48:21) I'm deleting that as well. Categories you should keep... Messages delete. Pending work as delete as all right.

Kiran (1:48:32) Yeah.

Speaker 6 (1:48:39) Then settings what is that for.

Kiran (1:48:42) That's for, I think, enabling and disabling stuff.

Speaker 6 (1:48:46) Also we keep that. Yeah, so I deleted everything except those three. Category stating then uses end.

Kiran (1:48:58) What test is what test could be failing? What the heck do you mean test? Test is running, I'm trying to control my tests. Oh, it is a test, but...

Speaker 6 (1:49:22) Wait, there's a conflict now.

Kiran (1:49:24) Yeah, does it... I'm trying to fix it, I don't know why.

Speaker 3 (1:49:30) You can. Can I also mean like... Merge conflicts.

Kiran (1:49:33) Yeah, I got a mushroom, compact. I don't know why. I don't change anything besides... Full Matting.

Speaker (1:49:38) Oh...

Speaker 6 (1:49:38) I think it's good pull whenever you merge it essentially creates a new commit so you need to get pulled.

Kiran (1:49:44) Oh yeah. I can.

Speaker 6 (1:49:53) So let's look at the cuter on the bits a bit.

Kiran (1:50:51) Where is the Stinger control A bit? Oh. Okay, I'm running the test again. Okay. Let's see. Resolve and merge conflictors. Um... Okay. Okay. It's running through the deployment tests... And then we're done.

Speaker 3 (1:53:55) 間...

Kiran (1:54:04) Yo... Damn. Damn. No, what do you mean, Lent? Lent, what do you mean?

Speaker 6 (1:54:20) There's another link.

Kiran (1:54:21) Oh my god, the Lent, it's literally... Killing me. What the hell?

Speaker (1:54:26) Wait.

Speaker 3 (1:54:28) Let me just open the door.

Kiran (1:54:29) Oh, I didn't push my changes, that's why.

Speaker 6 (1:54:37) Wait. There's also customers.

Kiran (1:54:45) I just checked them now. How are they tests?

Speaker 4 (1:54:52) We might have to go without these new changes.

Speaker 6 (1:54:57) And they fix this mostly, this is the problem.

Kiran (1:55:01) Hey, let me just...

Speaker 6 (1:55:04) Oh no! That would mean we'd have to take out the reverse final and final fixes, right? Hmm.

Kiran (1:55:15) Yeah, we need to make sure that this is working. But where is the lint issue that I'm not sure about?

Speaker 6 (1:55:36) Wait, change the buffer.

Speaker 3 (1:55:40) Send them.

Speaker (1:55:41) No.

Speaker 3 (1:55:43) When you pull up bring your laptop. I don't... Know why on my side it doesn't work, but I can't. All my submissions are read for every day. All of... Them. To put my assignment on your laptop and then try to log in from your laptop. So I'm guessing maybe it's the laptop or something, but I'm going... Hey, at this point...

Speaker 4 (1:56:14) You're just like, on the verge of conspiracy theories at this point. Well, I don't even know what... Difference would my laptop make.

Speaker 6 (1:56:27) I do not know what from what I am saying when I'm submitting it, it doesn't work. Let me wait. I'll show you.

Speaker 3 (1:56:36) It doesn't submit or...

Speaker 6 (1:56:38) It's submit. It submits and then it gives me zero...

Speaker 3 (1:56:42) On the sample input as well.

Speaker 6 (1:56:47) You see what that says...

Speaker 5 (1:56:50) Ne? Okay, okay...

Speaker 6 (1:56:51) Okay. You see what that says? Let me show you what...

Speaker 3 (1:56:55) The code means.

Speaker 6 (1:56:56) For those sample inputs.

Speaker 4 (1:57:02) Your outputs are right but then like the sample cases are really...

Speaker 3 (1:57:05) Infinite... Or... Yeah... I'm just a... Well...

Speaker 6 (1:57:13) Because at this point I think I'm just gonna crash out if this thing carries... On. But look. Where is that say?

Speaker 3 (1:57:20) For sample input... A, A1?

Speaker 4 (1:57:24) I would never look at this project, it didn't matter.

Speaker (1:57:27) Yeah. Like...

Speaker 6 (1:57:30) At this point, I'm just gonna... I'm just gonna... Place my pets and then see if it works on your laptop. If it doesn't... The left laptops, if it doesn't, I am a walkover to MSR. I'm not, I'm not jogging my work over to that building. I'm so I've been working on this project for five days...

Speaker 3 (1:57:50) A1 has been working since day one, but it's just been saying wrong wrong wrong...

Kiran (1:58:05) Oh, I think... I fixed it. I'm gonna go brush my teeth. I'll be back. All this runs.

Speaker (1:58:17) I'm going to go in. Look.

Speaker 4 (1:59:03) Yeah, I think I also have to leave, but not soon maybe like... 20... Minutes because I need... To walk to the station.

Speaker 3 (1:59:13) You know, we should be able to settle.

Speaker 6 (1:59:15) We should be ending the countdown.

Speaker 4 (1:59:18) Go shower, man. I'll see you guys.

Speaker 6 (1:59:21) Wait... Wait, wait.

Speaker 4 (1:59:24) Don't you stay like five minutes away from campus?

Speaker 3 (1:59:27) You know...

Speaker 4 (1:59:29) 20 minutes walk, I'll let you know.

Speaker (1:59:33) Yeah.

Speaker 4 (1:59:35) 20 minutes walk is crazy.

Speaker 6 (1:59:37) You'll be alright. So all of them passed. I'm just merging so that it deploys.

Speaker (1:59:42) I'm...

Speaker 4 (1:59:44) Literally getting just well... Like in this meeting.

Speaker (1:59:48) But...

Speaker 3 (1:59:49) There's... So much going...

Speaker 4 (1:59:52) On. You know, yes, I think he... Just took a lot of time.

Speaker 6 (1:59:57) Yeah, and I feel like the the gent just isn't fair, especially for what he's asking for the time he's given us. And all of the other assignments he also gives at the same time is just don't think about it. Some of us are doing... Down call. Do you already... Know... For was struggling... The workload?

Speaker (2:00:16) Hey.

Speaker 6 (2:00:19) Not aside.

Speaker 3 (2:00:21) We done with this thing. It's a mess.

Speaker (2:00:26) Done.

Speaker 6 (2:00:36) It's building.

Kiran (2:01:18) Oh you accepted the pull request for...

Speaker 3 (2:01:22) There you go. One of them at post.

Speaker (2:01:25) All right.

Kiran (2:01:25) Nice. Sweet. And that's it guys. We're done.

Speaker 6 (2:01:37) Maybe just have to make sure that it doesn't... Crash on deployment.

Kiran (2:01:41) Yeah.

Speaker (2:01:58) Morning.

Speaker 6 (2:02:03) I'd be pretty much going to take minutes, bro.

Kiran (2:02:07) Yeah, normally takes around 5.

Speaker (2:02:45) Thank you.

Speaker 4 (2:03:35) Advanced.

Kiran (2:04:16) It is still deploying. Probably early this is taking long.

Speaker 3 (2:04:39) I...

Kiran (2:04:41) Oh, this thing takes time, my forgot.

Speaker 3 (2:04:49) That's why I don't like...

Speaker 6 (2:04:52) I know I think it's something that GitHub... Does, I'm fairly certain, because when I deploy to my test of it, it takes like one minute or like one thirty...

Speaker 3 (2:05:01) Backs.

Speaker 6 (2:05:03) So it's something that Azure, like GitHub does...

Kiran (2:05:07) Oh my god.

Speaker 6 (2:05:07) Don't know what.

Kiran (2:05:08) Yes, my boy. Trying to get it? It is still not done. Oh my god. Oh it is done.

Speaker 6 (2:05:21) It's kind of something that...

Kiran (2:05:22) It is done. Let's go.

Speaker 6 (2:05:26) I should make sure that...

Speaker (2:05:32) This is fine. And then probably... Eld.

Speaker 6 (2:05:37) Oh, you wouldn't even have the questioning I forgot. Should we just add one or two... Requests there?

Kiran (2:05:48) On the public dashboard.

Speaker 6 (2:05:50) Should we just narrow it and then we'll just do it when we're there?

Kiran (2:05:52) Let's just leave it. Leave it. Leave it. Leave it. Leave it. It's fine.

Speaker 6 (2:05:56) It's still loading on my side. Oh, yeah, it's done. It...

Kiran (2:06:02) Cold start, so it takes a while longer.

Speaker 6 (2:06:05) It deployed. So that's I...

Speaker 3 (2:06:09) Deployed.

Kiran (2:06:15) Okay.

Speaker 6 (2:06:20) That's the...

Kiran (2:06:21) Okay. Okay guys. I'll see you at two.

Speaker (2:06:26) Yeah...

Kiran (2:06:26) All right.

Speaker 6 (2:06:27) I'll check...

Kiran (2:06:28) Just bye bye.

Speaker 5 (2:06:30) You guys. Cheers guys.
